

Society

Dr. Md. Ashraful Alam
Associate Professor
Institute of Social Welfare and Research
University of Dhaka

Society

- The term society can be traced to the Latin word **socius** which means companionship or friendship.
- Greek Philosopher Aristotle, *“Man is a social animal”*.
- **MacIver** - *“Society is a web of social relationship”*.
- **Morris Ginsberg** – *“Society is a collection of individuals united by certain relations or mode of behavior which mark them off from others who do not enter into these relations or who differ from them in behavior”*.
- **A.W. Green**, *“A society is the largest group to which any individual belongs.”*

- **P. Gisbert**, in his book “Fundamentals of Sociology” stated that, “*Society in general, consists in the complicated network of social relationships by which every human being is interconnected with his fellowmen.*”
- **Anthony Giddens** (2000) states; “*A society is a group of people who live in a particular territory, are subject to a common system of political authority, and are aware of having a distinct identity from other groups around them.*”
- **Example of society:**
- Primitive Society, Modern society, Rural and Urban society.

Characteristics of Society

➤ Abstract in Nature

- society is viewed as web of social relationships
- We can not see the structure of it, we can just feel it. It consists of social relations, human behavior, customs, rituals, etc.
- MacIver argued, “we may see the people but cannot see society or social structure, but only its only external aspects”.

➤ Dynamic in Nature

- Society is not static, it is dynamic. Change is ever-present in it.
- According to **Herbert Spencer**- *change is the rule of society*. It is like water in a stream or river that forever flows.
- Changes take place slowly, or gradually, suddenly or rapidly.

➤ **It Consists of People**

- It is composed of people. Without people, there is no society.
- No social relationships and no social life is possible.

➤ **It is not only a group of persons**

- According to sociologist **Wright**, *society is not a group of persons rather it is a relationship and interaction process among and between people and groups.*

➤ **It is a complex system**

- It is ever-changing. Due to continuous changes in people's roles, rights, duties, and conditions whole social structure gets changed.
- Its nature changed from simple to complex due to its dynamic nature.

➤ **It is based on interdependence**

- Nobody is self sufficient
- Society's people and groups are interdependent.
- One has to depend upon others for the satisfaction of needs.

➤ **Cooperation and conflict**

- People can satisfy their desires and fulfill their needs with the help of cooperation. Due to a lot of differences, we find conflicts in society. In it, like cooperation, conflict also existed directly or indirectly.
- “Society is cooperation crossed by conflict”. (MacIver and Page)
- “Cooperation is most elementary process of social life without which society is impossible” (Gisbert, 1957).

➤ **It is means of social control**

- It has various formal as well as informal means of social control.
- It means it has customs, traditions, conventions and folkways, mores, manners, etiquettes, laws, legislations, police, court, and other formal or informal means of social control to regulate the behavior of its members.

➤ **It consists of culture**

- Each society is distinct from others. Every society is unique because it has one way of life, called culture.

➤ **Mutual interaction and awareness**

- It is a group of people in continuous interaction with each other.
- Social interaction is made possible because of mutual awareness.
- without interaction and awareness (**we feelings**), there are no societies.

➤ **Society as a system of stratification:**

- Society provides a system of stratification of statuses and classes that each individual has a relatively stable and recognisable position in the social structure.

➤ **Permanent Nature:**

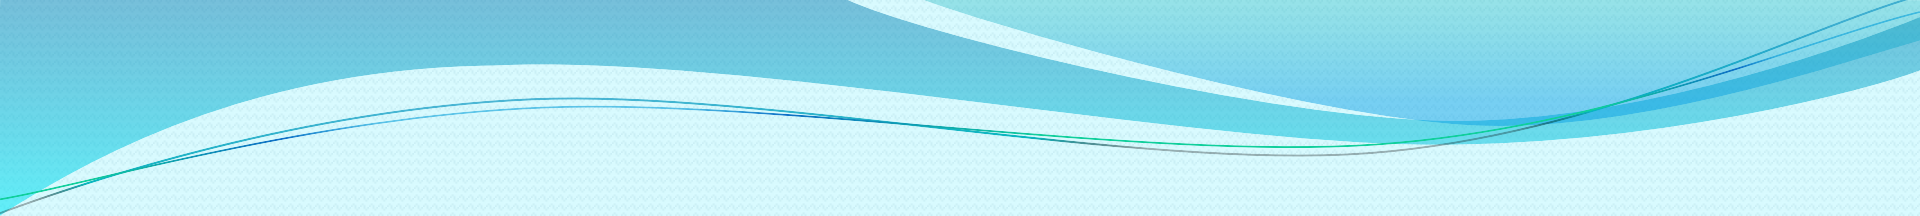

- It is not a temporary organisation of individuals. Society continues to exist even after the death of individual members.
- Society is a co-herent organisation.

Types/Evolution of Society

- 1. Hunting and gathering society
- 2. Pastoral society
- 3. Horticulture society
- 4. Agriculture/agrarian society
- 5. Industrial society and
- 6. Post industrial society

Hunting and gathering society

- Hunting / gathering society is the oldest and the simplest type of society.
- It relies heavily on hunting wild animals and gathering food for its survival.
- Example: Bushmen of Southwestern Africa Hunting
- These societies consist of very small but scattered groups.
- Statuses in these societies are essentially equal and hence the difference between the leader and followers is not there.
- Most decisions are made through group discussion.

- 
- Their needs are simple and easily satisfied
 - Political institutions are absent,
 - The social structure of these societies is necessarily very simple,
 - Their culture cannot become elaborate and diversified
 - Hunters and gatherers constantly face the danger of extinction in a struggle against adverse environments
 - Limited or no division of labor
 - There is no gender inequality.

Pastoral society

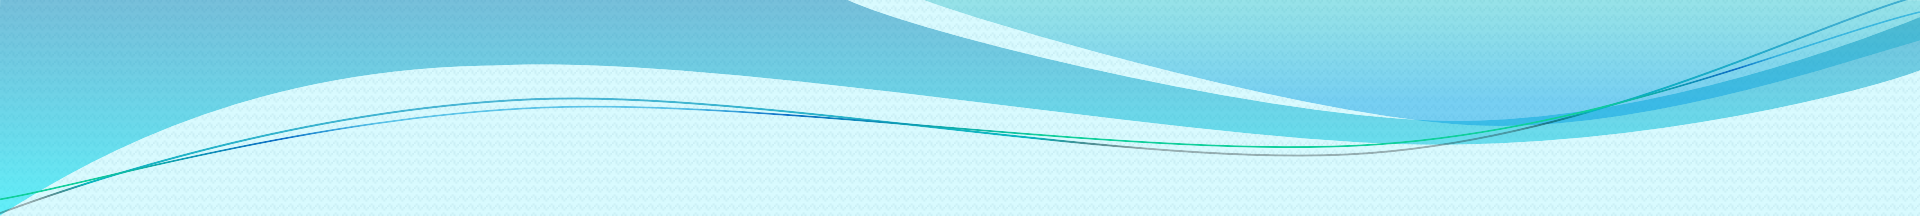

- Pastoral societies are those whose livelihood is based on pasturing of animals, such as cattle, camels, sheep and goats.
- The first pastoral societies emerged between 10,000 and 12,000 years ago,
- Many pastoral societies still exist in the modern world, particularly in Africa and the Middle East.
- Pastoralism is a much more reliable and productive strategy than hunting and gathering.

Horticulture society

- Horticultural are those whose economy is based on cultivating plants by the use of simple tools, such as digging sticks, hoes, axes, etc.
- Horticultural societies developed around 7000 BC in the Middle East and gradually spread west through Europe and Africa and east through Asia.
- Cultivation is more often a female responsibility in horticultural societies than in agrarian societies
- Polygamy—when a husband has multiple wives—is common.

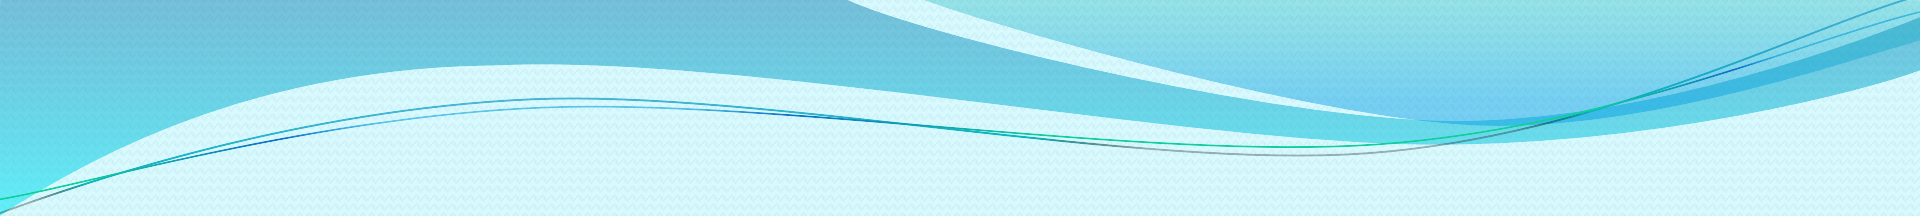

Agriculture society

- An agrarian society focuses its economy primarily on agriculture and the cultivation of large fields.
- The first agrarian societies arose approximately 5000 to 6,000 years ago in Mesopotamia and Egypt and slightly later in China and India.
- Simple living pattern
- Emphasis on agriculture and farming as the primary method of subsistence
- Agrarian farmers work much harder than do the members of earlier types of societies.

- 
- Most members of agrarian societies are peasants.
 - Non-mechanised agriculture
 - Grow most of own food etc to meet most of subsistence needs.
 - They also grow a surplus to sell etc.
 - Status of women is usually low.

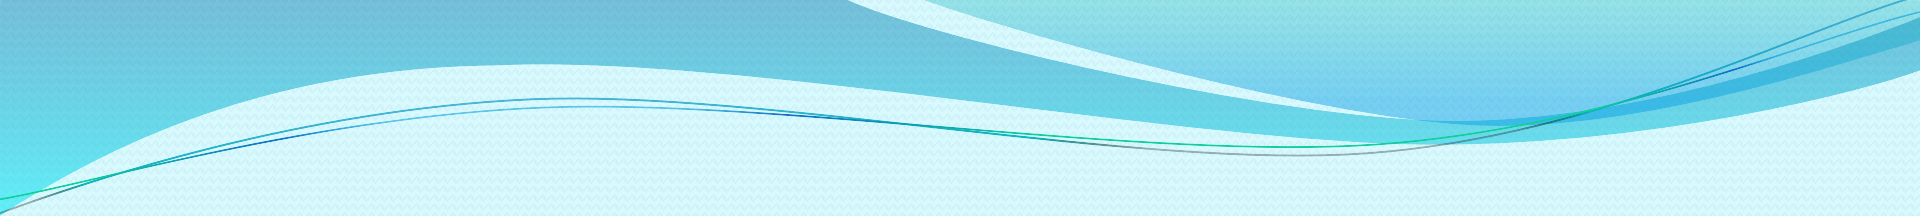

Industrial society

1. Industrial Society is Associated with Industrial Revolution
2. The economy is industry-based
3. Rapid Social Changes
4. Larger Societies with Huge Populations
5. Losing Importance of Family and Kinship
6. Religion Losing its Hold over the People
7. Increasing Importance of Science and Education
8. Widening Gap between the Rich and the Poor

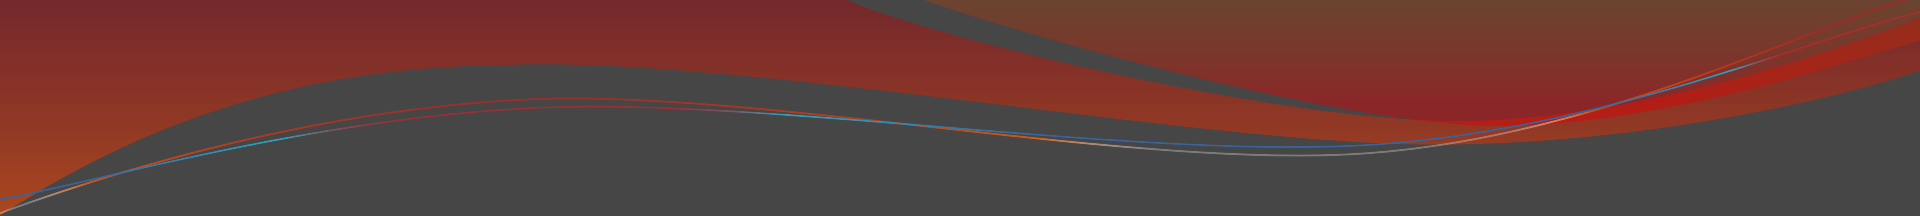

- 
9. Crime and social problems
 10. Materialism
 11. Heterogeneous culture
 12. Statuses are achieved
 13. Formal social control
 14. Individualism
 15. Migration to cities

Post industrial society

- Postindustrial societies dominated by information, services, and high technology more than the production of goods
- The replacement of blue-collar manual labourers with technical and professional workers—such as computer engineers, doctors, and bankers—as the direct production of goods is moved elsewhere.
- The replacement of practical knowledge with theoretical knowledge.
- Welfare state
- Global culture
- Individualism
- Competition

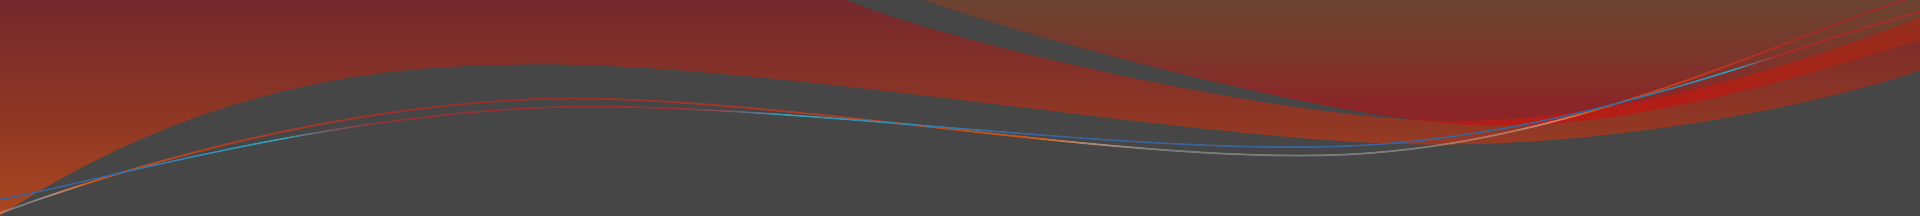

- **Thank you all**

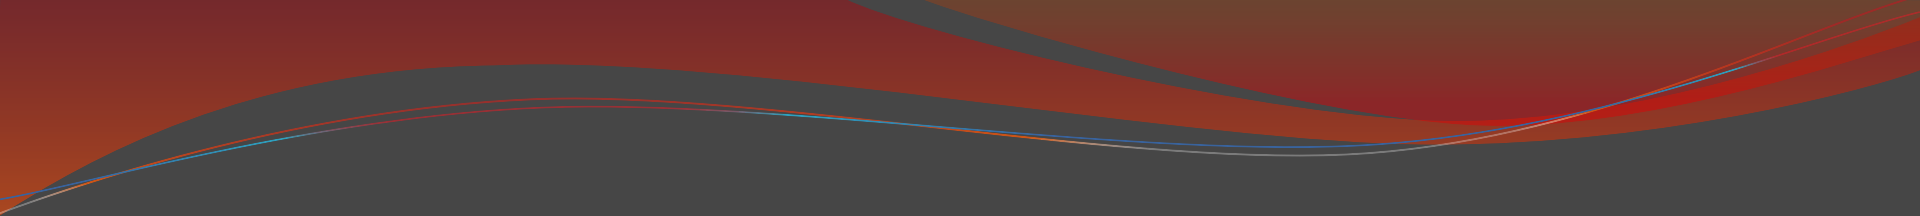

Origin and Development of Sociology

- The term “sociology” was coined in 1838 by Auguste Comte.
- But, sociological writings have a long background in history and are rooted in the works of philosophers such as Aristotle (384-322 B.C.), Plato (427-347 B.C.).
- Plato’s ‘Republic’ and in Aristotle’s ‘Ethics and Politics’ focused on methodical explanation of law, the state and society.
- Sir Thomas Moore in his book “Utopia” in 1515, dealt with day to day social problems.

- 
- Italian writer Vico (1668–1744) in his book “The New Science” opined that society was subject to definite laws which could be observed through objective observation.
 - French scholar Saint Simon (1760-1825) tried to develop a new science which would study social life like physics studies the physical world.

- 14th century philosopher and historian Ibn Khaldun (1332-1406) often considered as one of the world's first sociologists
- His works include; a social conflict theory, a description of political economy, and an investigation linking the level of social cohesion of a tribe to its capacity for power, all of which is believed to set the foundation of the development of modern sociology.
- In the 18th century, scholars such as John Locke, David Hume, Immanuel Kant, Voltaire, Thomas Hobbes and Jean Jacques Rousseau among others (often referred to as enlightenment philosophers) developed several theories and principles that explained social reality.

- 
- Despite the writings and contributions of early philosophers, the basis for sociology as a modern discipline was not established until the nineteenth century.
 - The origin of sociology is attributed to the numerous developments in the 18th and 19th century especially through the Enlightenment, the Industrial Revolution and the French Revolution.

The Enlightenment

- The Enlightenment refers to an intellectual movement, primarily in France and Britain which spans approximately one hundred years from the 1680s to 1789.
- According to the French historians, the era of Enlightenment was initiated in the years 1715 just after the death of Louis XIV and referred as 'The Age of Reason'.
- The stage for the Enlightenment were writers and scientists who investigated the natural world and systems of thought, writers such as Galileo (Italian), Newton (English), Francis Bacon (1561-1626, English).

- During the Enlightenment, thinkers such as Montesquieu, Voltaire, and Rousseau challenged traditional norms and institutions, such as the monarchy and the church, and called for greater individual liberty and equality.
- The writings of the Enlightenment profoundly affected politics and the development of sociology.
- These ideas inspired a more scientific and rational approach to understanding human society, and set the stage for the development of sociology as a discipline.

Thomas Hobbes(1588-1679)

- Argued that people are cruel, greedy, and selfish- as a result government (law) protects people from each other
- Without government, people would fight, rob, and oppress one another;
- Social Contract- an arrangement where people give up their rights to be protected by the government;
- Supported absolute monarchs;
- Wrote about his ideas in his book “The Leviathan.”

John Locke(1632-1704)

- Believed that people are basically moral and reasonable. They want to do the right thing.
- All people are born free & equal with three natural rights- life, liberty, and property
- Government exists at the consent of the governed to protect their rights. If the government fails to protect these rights, the contract is broken and the people may change or replace the government.
- Wrote “Two Treatises of Government” stressing the best governments had limited power—not an absolute monarchy.

Montesquieu (1689 –1755)

- Montesquieu in his famous work “The Spirit of Laws” had analysed the role of external factors in life of human societies
- Criticized absolute monarchies—admired Britain's limited monarchy and said it protected people's rights.
- He argued as Locke and Thomas Jefferson that all people were created equal. If the King did not have the right to rule, then the people had the right to rebel which they did.
- Believed having 3 branches in government would prevent tyranny (absolute ruler abuses power; unfair and harsh rule)
- Believed gov't should be split into these three branches, and that each branch should be able to serve as a check on the other two:
 - -Executive (enforces laws)
 - -Legislative (makes the laws)
 - -Judicial (applies laws)

Voltaire(1694-1778)

- Believed in the freedom of press and used it to expose the abuses of corrupt political and church leaders.
- Fought for civil liberties- rights/freedoms of citizens
 - -Freedom of Speech
 - -Freedom of Religion
 - -Separation of Church and State
- Believed that humanity's worst enemies were intolerance, prejudice & superstition
- His writings angered government and church officials.
- He was imprisoned and forced into exile.
- To stop his ideas from spreading his books and writings were outlawed and burned.

Jacques Rousseau(1712-1778)

- Rousseau wrote “The Social Contract” where he lays out his ideas of government and society
- Believed that people were naturally good, but were corrupted by society
- Unequal distribution of property was an especially great evil of society
- Stressed the importance of the general will- the will of the people as a whole
- Believed the good of the community should be placed above individual interests- common good
- Hated all forms of political and economic oppression
- Only governments that had been freely elected should impose law
- Sovereignty (the power to make laws) should be in the hands of the people, and therefore the only good government is a direct democracy

French Revolution

- French Revolution(1789) was the mass uprising of the people of France against the dictatorial and anti-people policies of the monarch.

Social Cause

- French society in the 18th century was divided into three estates Clergy, Nobles & Common people.
- The members of the first two estates, enjoyed privileges by birth.
- Peasants made up about 90% of the population, however, only a small number of them owned the land they cultivated.
- About 60% of the land was owned by nobles and church which they leased to peasants for greater share in the production.
- Peasants were obliged (bound) to render free services to the lord- to work in his house and fields to serve in the army or to participate in building roads.

ECONOMIC CAUSES

- French economy was based on revenue from land and on feudal system.
- During Louis XVI, France had 2 billion liver (French currency) debt (loan).
- The government charged huge taxes from third estate.
- First two estates were exempted from paying.
- The population of France rose from about 23 million in 1715 to 28 million in 1789.
- High prices of the food grains.
- Low wages of workers.
- Useless wars

POLITICAL CAUSES

- In 1774, Louis XVI ascended the throne of France.
- He was 20 years old when he married to the Austrian princess Marie Antoinette who always interfered with the administration.
- He ruled as an absolute monarch.
- He had maintained a huge army and built a big extravagant court at the immense palace of Versailles which drained the wealth of France.

Industrial Revolution

- *A Revolution is a rapid, total and permanent change.*
- The Industrial Revolution changed human life drastically.
- More was created in the last 250+ years than in the previous 2500+ years of known human history.
- The term Industrial Revolution was first popularized by the English economic historian **Arnold Toynbee** (1852–83) to describe Britain's economic development from 1760 to 1840.

- The Industrial Revolution was a fundamental change in the way goods were produced, from human labor to machines.
- The industrial revolution was a period of major industrialization that took place during the late 1700s and early 1800s.
- The **Industrial revolution** was the major shift of technological, socioeconomic and cultural conditions in the late 18th and early 19th century that began in Britain and spread throughout the world.
- The Phrase Industrial Revolution covers many different developments which all took place at the same time.
- By 1850 industrialization was taking root in parts of Western Europe and the USA, and by the end of 19th century it had spread to Russia and Japan.

- Industrial revolution is the vast social and economic changes that resulted from the development of steam-powered machinery and mass-production methods, beginning in the late eighteenth century in Great Britain and extending through the nineteenth century elsewhere in the world. [*Academic Press Dictionary of Science and Technology*]

Main Feature of IR

- Mass production of goods.
 - Increased numbers of goods.
 - Increased diversity of goods produced.
- Development of factory system of production.
- Rural-to-urban migration.
 - People left farms to work in cities.
- Development of capitalism.
 - Financial capital for continued industrial growth.
- Development and growth of new socio-economic classes.
 - Working class, and wealthy industrial class.
- Commitment to research and development.
 - Investments in new technologies.
 - Industrial and governmental interest in promoting invention, the sciences, and overall industrial growth.

Background of the Industrial Revolution

- Commercial Revolution
 - Increased geographic knowledge
 - Colonies in the Americas and Asia
 - Europeans expanded their power worldwide
 - Increased trade and commerce
 - Guild system could not meet the demands of increasing numbers goods

○ Scientific Revolution

- 17th and 18th centuries
- invention of Galilio, Boyle, Lavoisier, Newton, etc.

○ Intellectual Revolution

- 17th and 18th centuries
- Writings of Locke, Voltaire, Rousseau etc.

○ Atmosphere of discovery and free intellectual inquiry

- Greater knowledge of the world
- Weakened superstition and tradition
- Encouraged learning and the search for better and newer ways of doing things

Bill of Rights

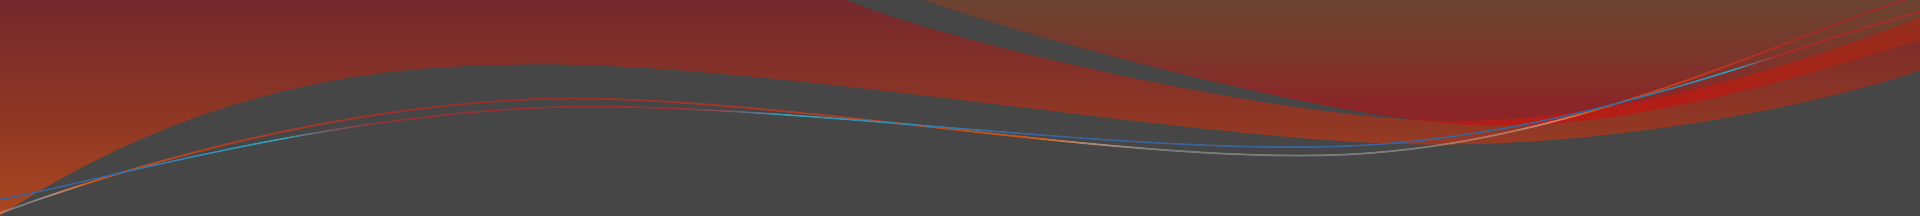

- When the Constitution was approved in 1789, some people felt that it did not protect some basic rights and that the Constitution should be changed to protect those rights.
- On December 15, 1791, changes were made to the Constitution. These first 10 changes, or amendments, guarantee specific freedoms and rights; together they are called the Bill of Rights.
- The Bill of Rights was influenced by the Virginia Declaration of Rights written in 1776 by George Mason.
- The Bill of Rights includes some of the most basic freedoms and rights that we think of today in the United States. These are a few of the key ideas in each amendment:

Bill of Rights

Amendment	Rights and Protections
First	Freedom of speech Freedom of the press Freedom of religion Freedom of assembly Right to petition the government
Second	Right to bear arms
Third	Protection against housing soldiers in civilian homes
Forth	Protection against unreasonable search and seizure Protection against the issuing of warrants without probable cause

Fifth	Protection against trial without indictment double jeopardy self-incrimination property seizure
Sixth	Right to a speedy trial Right to be informed of charges Right to be confronted by witnesses Right to call witnesses Right to a legal counsel
Seventh	Right to trial by jury

Eighth	Protection against excessive bail excessive fines cruel and unusual punishment
Nineth	Rights granted in the Constitution shall not infringe on other rights.
Tenth	Powers not granted to the Federal Government in the Constitution belong to the states or the people.

- 
- Most influential sociologists:
 - Auguste Comte
 - Karl Marx
 - Herbert Spencer
 - Emile Durkheim
 - Max Weber

Auguste Comte(1798-1857)

- Founder of Sociology because he first used the term Sociology as the study of society
- Lived during the French Revolution and believed his philosophy would bring stability to the world;
- Believed sociologists should use the scientific methods to uncover the laws that govern the operation of society;
- **Comte wanted** to use scientific observation to study social behavior
- He called this positivism - should be a science on knowledge of which we can be “positive”, or sure

- He also distinguished between studying social stability and order (social statics) and study of social change (social dynamics)
- Used the term **social statics** to describe the processes by which the overall structure of a society remains relatively stable, or unchanged, over time... relates to order
- Used the term **social dynamics** to the processes by which elements within the society change in a systematic fashion to allow for social development ... relates to change

Karl Marx (1818-1883)

- Got his doctorate from the University of Berlin,
- Moved to Paris but was expelled from there at the request of the German government...moved to Brussels and then London
- Believed that the overall structure of society is influenced by how the economy is organized;
- Society is divided into two: Those that own the means of production and those who own only their labor
- This imbalance of power leads to a conflict between owners and laborers
- Saw that the ills of the capitalist system would not be solved until the workers overthrew those in power.

Herbert Spencer(1820-1903)

- Influenced by Charles Darwin and so adopted a biological model of society
- In a living organism, the biological systems work together to maintain the health of the organism... so he saw society as a set of independent parts that work together to maintain the system over time
- Took the theory of evolution to describe the nature of society: saw social change and unrest to be natural occurrences in a society's evolution toward stability and perfection

- Thought that since the best aspects of society will survive over time [“survival of the fittest”], we shouldn’t correct social ills
- Thought that the fittest societies would survive over time, which will lead to a general upgrade of the world as a whole
- Started type of sociology called Social Darwinism: the perspective that holds that societies evolve toward stability and perfection

Emile Durkheim(1858-1917)

- French, taught philosophy before switching and offering the first social science course in France
- First to apply the scientific method to the study of society
- Focused on social order and like Spencer, saw society as interdependent parts that maintain the system over time
- Saw those roles as functions
- A function is a positive consequence that an element of society has for the maintenance of the social system
- Shared beliefs and values are the glue that holds society together
- Especially how religion maintains social order and suicide

Max Weber(1864-1920)

- Max Weber created his own theory of **social stratification**, defining social differences through three components: class, status, and power.
- Here, Class is a person's economic position based on both birth and individual achievement.
- Status is one's social prestige or honor either influenced or not influenced by class;
- Power is the ability for someone to achieve their goals despite the resistance of others.

Sociology

- Sociology is defined as the study of society
- It covers all the elements of society like social relation, social behaviour, social interaction and culture that is common in our everyday life.
- The teaching of sociology as a separate discipline started in 1876 in the United States, in 1889 in France, in 1907 in Great Britain, after World War I in Poland and India, in 1925 in Egypt and Mexico, and in 1947 in Sweden.
- The teaching of sociology began as early as 1926 in the philosophy department at Dhaka University as a part of a course “Ethics and Sociology”
- As separate department started its journey in 1956 at Dhaka University.

Origin of the term 'Sociology'

- The term 'Sociology' is derived from the Latin word 'socius,' which means 'associate' or 'society,' and the Greek word 'logos,' which means 'systematic study' or 'science.'
- Hence, it is a systematic study of society and associated people.
- The term 'Sociology' was first used by the French philosopher and Mathematician 'Auguste Comte' in 1842 in his book "Cours de Philosophie Positive" (Course of Positive Philosophy) for which he was considered as the father of Sociology.

Definition

- Sociology is a scientific study of human society, its origin, structure, function, and direction.
- **August Comte**-*“sociology is the scientific study of society”*
- **Mex Weber**-*“Sociology is the study of social action”*
- **Park & Burgess**-*“Sociology is the study of collective behavior”*
- **Emile Durkhiem**-*“Sociology is the study of social facts through social institutions”*.
- **Tonnies**-*“Sociology is the study of humans living together”*

- **Mack Young**-*“Sociology is the study of social aspects of human life”*
- **Kingsley Davis** -*“Sociology is a general science of society”*
- **Harry M. Johnson**- *“sociology is the science that deals with social groups”*.
- **Ogburn and Nimkoff**- *“the scientific study of social life”*.
- **Franklin Henry Giddings**- *“the science of social phenomena”*.
- On the basis of above definitions, we can conclude that sociology is concerned with men, their social relations and their society.

Subject matter of Sociology

- Sociology focuses on almost every aspect of society.
- It investigates society as a whole, as an interrelated system.
- It examines how society and people interact with one another.
- It tries to explore how societies appear, continue and then change.
- It focuses on society, human social activities, social relationships, social interaction and aspects of culture associated with our everyday life.
- It uses various methods and ways to develop an idea about society and social problems.

- It focuses on other institutions like education, health care, medicine, economy, military, punishment and system of control.
- Some sociologists do research to get the actual solution for a problem or to know how a topic is responsible for social inequalities within our society.
- It also focuses on traditional issues of society like Social class, caste, gender, race, religion, law, social stratification, social mobility, etc.

Nature/characteristics of Sociology

- **Humanizing Science:**
- It is a humanizing science that focuses on understanding human behavior, interactions, and societies.
- **Sociology is an Independent Science.**
 - I. It is not treated and studied as a branch of any other science like philosophy or political philosophy or history.
 - II. As an independent science it has its own field of study, boundary and method.

- **Sociology is a Social Science and not a Pure Science.**
 - I. As a social science it concentrates its attention on man, his social behaviour, social activities and social life.
 - II. The fact that sociology deals with the Social universe it distinguishes from astronomy, physics, chemistry, geology, mathematics and other physical sciences.

- **Sociology is a Categorical and not a Normative Discipline**

- I. Sociology “confines itself to statements about what it is, not what should be or ought to be”.
- II. But it does not mean that sociological knowledge is useless and serves no purpose.
- III. It only means that sociology as a discipline cannot deal with problems of good and evil, right and wrong, and moral and immoral.

- **Sociology is a Theoretical and not an Applied Science**

- I. It's main aspect is acquisition of knowledge about human society
- II. Each pure science may have its own applied field. For example: physics is a pure science and engineering is its applied field.
- III. Sociology as a theoretical subject and its applied field such as administration, diplomacy, social work etc.

- **Sociology is Relatively an Abstract Science and not a Concrete Science**

- I. Sociology is not interested in concrete only it demonstrations of human events.
- II. It is more concerned with the form of human events and their patterns.
- III. For example: sociology is not concerned with particular wars and revolutions but with war and revolution in general, as a social phenomena, as a type of social conflict.

- **Sociology is a Generalising and not a particularising or individualising Science**
 - I. Sociology tries to find out the general laws of principle about human interaction and association, about the nature, form, content and structure of human groups and societies.
 - II. It does not study each and every event that takes place in society. It is not possible also.

Importance Of Sociology

- Sociology makes a scientific study of society
- Scientific study of social behaviour of humans
- Provides basic knowledge about human society
- Sociology studies role of the institutions in the development of the individuals
- Understanding social circumstances
- For understanding and planning of society
- Identifying social problems
- Solution of social problems

- To change outlook the problems of crime
- To enrich human culture
- To keeps us update on modern situations
- Helps in conciliation and adjustment
- Social reform and reconstruction
- To preserve cultural heritage
- To overcome prejudices, misconceptions
- To promote the welfare of the tribal/minorities/weaker people
- For socialization

Sociology as a Science:

- According to Auguste Comte and Durkheim, “Sociology is a science because it adopts and applies the scientific method”.
- Sociology does make use of scientific methods in the study of its subject matter.
- Hence Sociology is a science.
- It is a science because of the following reasons:

- **(1) Sociology adopts scientific method:**
- Though it cannot do experiment with men in a laboratory still man's social behaviour is subject to scientific investigation like natural phenomenon.
- It employs scientific methods as scales of sociometry schedule, case study, interview and questionnaire which is used to quantitatively measure social phenomenon.

- (2) **Sociology makes accurate observation:**
- laboratory experiment is not the only criteria of science.
- The whole social world is the laboratory of sociology.
‘Newton did not invent their laws inside a laboratory.
- Sociology makes observation of tribal marriage at the time of occurrence.

- **(3) Objectivity is possible in Sociology:**
- Sociology can also make objective study of social phenomena.
- New techniques and methods are also introduced to make social phenomena more objective.
- The statement that dowry is a social evil is an objective statement which is based on facts collected by sociologists.
- Further Survey and revivification proves this.

- **(4) Sociology describes cause-effect relationship:**
- While studying family or population growth Sociology has traced the relationship between family disorganisation and divorce and population growth and poverty.
- Family disorganisation is the cause of divorce and population growth is the cause of poverty.
- Thus sociology describes cause-effect relationship in social disorganisation and population explosion.
- Hence sociology is a science.

- **(5) Sociology makes accurate measurement:**
- Sociology, like natural sciences also accurately measures social phenomena or relationships.
- By using statistical method, socio-metric scale, scales of measurement sociology effectively and accurately measures social relationships.
- Hence Sociology is a science.

- **(6) Sociology makes accurate Prediction:**
- On the basis of cause-effect relationship sociology can accurately predict about future.
- If there will be dowry in society then it will lead to suicide, poverty.
- Cuvier opines this predictive value of Sociology is improved day by day. As Sociology matures day by day it predicts more accurately.

- (7) **Sociology makes generalization:**
- The notion that generalization drawn by social sciences are not universal proved wrong. Like natural sciences Sociology became able to draw generalization which is universally applicable.
- The concept of incest taboo-prohibited sex relationship among blood relatives is a universal truth.

- **The principles of Sociology are Universal:**
- The laws of sociology prove true at all times and places. As long as the conditions do not vary, the laws are devoid of any exceptions.
- For example, the principle that individual disorganisation and social disorganisation depend upon each other is true in all times and at all places.

Limitations of Sociology as a Scientific Discipline

- There are some others like Max-weber who deny the status of science to Sociology.
- He said Sociology can't be an objective Science. However, those who deny the status of science to Sociology they put forth following arguments:
- **Lack of Experimentation:**
- **Lack of Prediction:**
- **Lack of accurate measurement**

- The above argument shows that Sociology is not a science. But famous Sociologist Robert Bierstedt in his book “The social order” clearly explain the nature of Sociology in the following way:
- (1) Sociology is a social and not a natural science.
- (2) Sociology is a positive and not a normative science.
- (3) Sociology is a pure science and not an applied science.
- (4) Sociology is an abstract science and not a concrete science.
- (5) Sociology is a generalising science and not a particularising science.
- (6) Sociology is both a rational and an empirical science.

Thank you All

Sociological Perspective

sociological perspective

- “The perspective of sociology involves seeing through the outside appearances of people’s actions and organisations” (Berger, 1963).
- The sociological perspective is one that observes society through a lens without personal opinions.
- It not only observes the patterns of society but also tries to explain such patterns or behaviours.
- Sociologists are not concerned with personal characteristics; instead, they aim to find common attitudes and features as well as hidden patterns in those characteristics and behaviours across millions of people.
- One of the main objectives of the sociological perspective is to find and understand patterns behind recurring features of social interaction, as well as to examine the social impacts of these.

The Functionalist Perspective

- Functionalism is a sociological **consensus theory** that places importance on our shared norms and values.
- The functionalist perspective is based largely on the works of Herbert Spencer, Emile Durkheim, Talcott Parsons, and Robert Merton.
- It states that we all have a function in society and compares society to a human body with its many functioning parts.
- All parts are necessary to maintain function and to promote orderly social change.
- Therefore, if one part, or organ, is dysfunctional, it may lead to complete dysfunction.

- Functionalists believe all individuals and institutions in society should cooperate as they carry out their roles.
- Functionalists believe this consensus comes from shared norms and values.
- In this way, society will function, and prevent 'anomie', or chaos.
- It is a consensus theory, believing that societies are typically harmonious and based on high levels of consensus.

- According to functionalism, society is a system of interconnected parts that work together in harmony to maintain a state of balance and social equilibrium for the whole.
- For example, each of the social institutions contributes important functions for society:
- Family provides a context for reproducing, nurturing, and socializing children; education offers a way to transmit a society's skills, knowledge, and culture to its youth; politics provides a means of governing members of society; economics provides for the production, distribution, and consumption of goods and services; and religion provides moral guidance and an outlet for worship of a higher power

- The functionalist perspective emphasizes the interconnectedness of society by focusing on how each part influences and is influenced by other parts.
- For example, the increase in single parent and dual-earner families has contributed to the number of children who are failing in school because parents have become less available to supervise their children's homework.
- As a result of changes in technology, colleges are offering more technical programs, and many adults are returning to school to learn new skills that are required in the workplace.
- The increasing number of women in the workforce has contributed to the formulation of policies against sexual harassment and job discrimination.

- Functionalists use the terms functional and dysfunctional to describe the effects of social elements on society.
- Elements of society are functional if they contribute to social stability and dysfunctional if they disrupt social stability. Some aspects of society can be both functional and dysfunctional.
- For example, crime is dysfunctional in that it is associated with physical violence, loss of property, and fear.
- But according to Durkheim and other functionalists, crime is also functional for society because it leads to heightened awareness of shared moral bonds and increased social cohesion.

The Conflict Perspective

- It is the reverse of functionalism
- The conflict perspective views society as composed of different groups and interest competing for power and resources
- There is a constant struggle for power and control
- Those in power can then constrain those who are less powerful by limiting their access to resources (Inequality)
- As the power shifts between one group or another, change occurs.

- The origins of the conflict perspective can be traced to the classic works of Karl Marx.
- Marx suggested that all societies go through stages of economic development.
- As societies evolve from agricultural to industrial, concern over meeting survival needs is replaced by concern over making a profit, the hallmark of a capitalist system.
- Industrialization leads to the development of two classes of people: the bourgeoisie, or the owners of the means of production (e.g., factories, farms, businesses); and the proletariat, or the workers who earn wages

- The division of society into two broad classes of people—the “haves” and the “have nots”—is beneficial to the owners of the means of production.
- The workers, who may earn only subsistence wages, are denied access to the many resources available to the wealthy owners.
- According to Marx, the bourgeoisie use their power to control the institutions of society to their advantage.

Symbolic Interactionist perspective

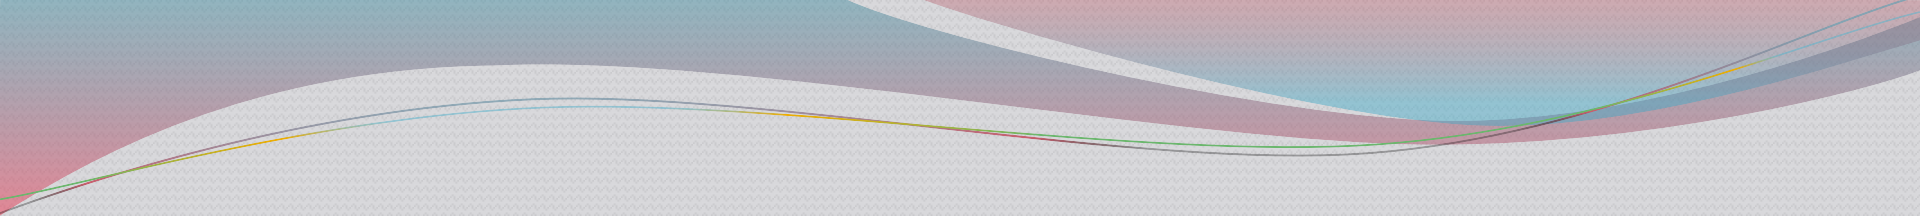

- The primary focus in this approach is communication and exchange of ideas using symbols.
- Symbols are culturally derived social objects having shared meanings that are created and maintained in social interaction.
- Major sociological theorists or contributors to this theoretical approach include: Max Weber; George Herbert Mead; Charles Horton Cooley; Erving Goffman; George Homans; and Peter Blau.

- **Symbolic interactionism** focuses on the interaction of individuals and on how they interpret their interaction.
- Symbolic interactionism emphasizes that human behavior is influenced by definitions and meanings that are created and maintained through symbolic interaction with others.
- The symbolic interactionist perspective is based on the notion that people make sense of their social worlds through communication and social interaction - the exchange of meaning through symbols and language.
- Its roots lie in the work of early 1900s American sociologists, social psychologists, and philosophers who were interested in human consciousness and action.

Thank you

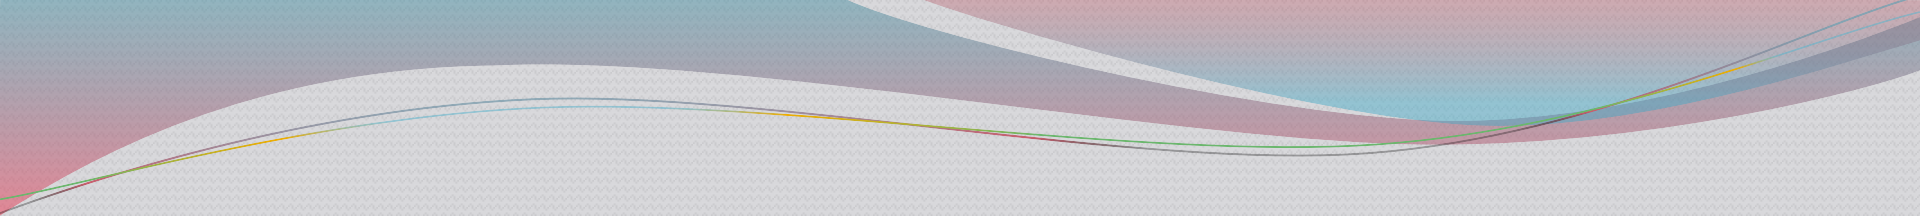

Scientific Research in Sociology

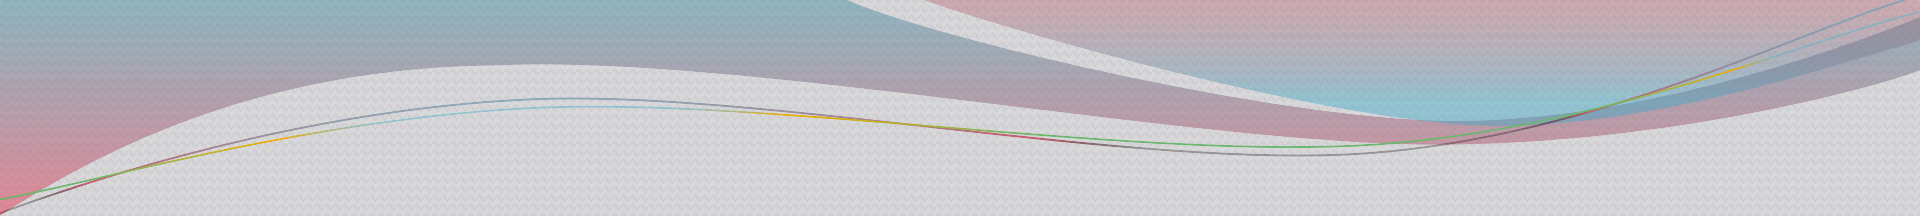

Research

- RESEARCH=Re ----- Search
- Re means (once more, afresh, anew) OR (back; with return to a previous state)
- Search means (look thorough or go over thoroughly to look something) OR (examine to find anything concealed)
- Research is search for knowledge.
- Research means finding answers to the questions.
- Research is defined as a scientific and systematic search for information on a specific topic.
- Organized scientific investigations to solve problems, test hypotheses, develop or invent new products.

- 
- The systematic, rigorous investigation of a situation or problem in order to generate new knowledge or validate existing knowledge.
 - **Bulmer**- *Research is primarily committed to establishing systematic, reliable and valid knowledge about the social world.*
 - **Neuman** -*A collection of methods and methodologies that researchers apply systematically to produce scientifically based knowledge about the social world.*

Social Research

- Social research is the combination of three words. “Social” means society “Re” means again and again and “Search” means to discover, to find and to investigate.
- Social research is a procedure to investigate the social problems and issues and also it helps us to find the causes and give solution for problems which are faced by society.
- **Social research** is a method used by social scientists and researchers to learn about people and societies.
- Social research works to answer many of the questions we have about human behavior.
- Through scientific study, social research seeks to understand the how and why of human behavior.

- 
- According to P. V. Young, *“Social research is a scientific undertaking which by means of logical methods, aim to discover new facts or old facts and to analyze their sequences, interrelationships, casual explanations and natural laws which govern them.”*
 - According to C. A. Moser : *“Social research is a systematized investigation to gain new knowledge about social phenomenon and problems.”*
 - According to Wallace and Wallace, *“Sociological research refers to the structural observation of social behavior.”*

Objectives of social research

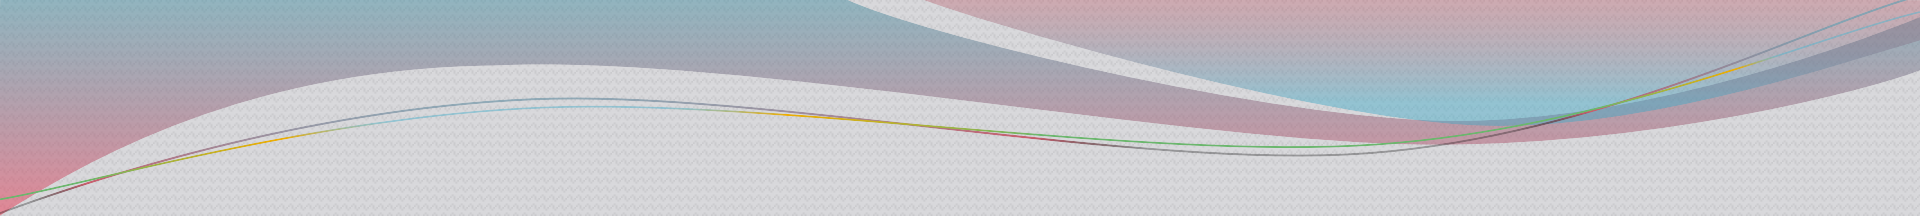

- To facilitate the understanding of human behavior.
- To acquire knowledge about social phenomena, events, issue, problems etc.
- To identify functional relationship existing in the social phenomena.
- To find out the natural laws that regulates or directs social phenomena.
- To standard the society concept, e.g. culture, struggle, generation gap, social distance etc.
- To formulate solution to social problems.
- To maintain social organization, remove social tension, misconception, etc.
- To develop social plan.

Importance of Social Research

- **Identifying the causes of social problems:** social research logically finds the causes of problems from grass root level.
- **Solution of problems:** by the help of Social Research we can be able to effectively solve a particular problem .
- **New ideas and techniques:** social research provides new ideas and technique to solving the individuals, groups, and communities problems.
- **To develop theories:** Many social scientist have presented their theories through social research. All social, psychological, and environmental theories had been depended on social research.
- **Increase knowledge:** social research is also considered as a source of knowledge increase. It increases the knowledge of human being.

Types of social research

- **Quantitative Research**
- Quantitative research involves collecting and analyzing numerical data.
- If there are no numbers involved, its not quantitative
- Since this type of scientific research is numeric, its aim is to evaluate the “when,” “where,” and “what” of the research topic or question.
- It’s mainly expressed in numbers, statistics, and graphs.
- This type of research is generally used to establish generalised facts about a particular topic

- 
- Creswell (2014) defines **quantitative research** as :“*an inquiry into a social or human problem, based on testing a theory composed of variables, measured with numbers, and analyzed with statistical procedures, in order to determine whether the predictive generalizations of the theory hold true*”.
 - This method is widely used in natural and social sciences, such as biology, chemistry, psychology, economics, sociology, market evaluation, and others.

Quantitative research characteristics

- Large sample size
- Quantitative data is measurable
- Close-ended questions
- Structured data
- Easy-to-use data collection methods
- Data analysis
- Reliable
- Reusable outcomes
- Generalization of results

Advantages of quantitative research

- Easier to analyze
- Allows using large sample sizes
- Less biased and more accurate
- Does not require observation.
- Research performed is anonymous and can have honest responses.
- **Disadvantages:**
- It does not study the reason behind a response.
- Quantitative research can be very expensive.

Types

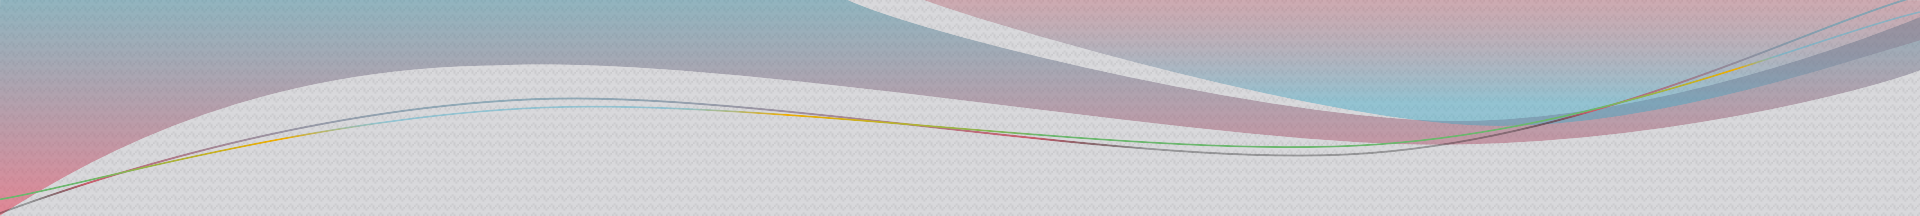

- **Surveys** – This method involves the use of questionnaires to gather data from a large group of people.
- The surveys can be administered face-to-face, through email or online platforms.
- Kerlinger (1973) defined survey research as a study on large and small populations by selecting samples chosen from the desired population and to discover relative incidence, distribution and interrelations.
- **Experiments** – Researchers manipulate the independent variable in controlled laboratory settings to observe the effect on the dependent variable.
- **Observational Studies** – This method involves observing and recording the behaviour of people in their natural environment. The researcher can use either structured or unstructured observations.
- **Content Analysis** – This method involves the analysis of text, audio, or visual media to identify themes, patterns, or trends in the data.

Qualitative research

- Qualitative research is used to gain an understanding of human behaviour, intentions, attitudes, experience, etc., based on the observation and interpretation of people.
- The aim of qualitative research is to understand the social reality of individuals, groups, and cultures as nearly as possible as its participants feel it or live it.
- Qualitative research aims to investigate the “why” and the “how” of the decision-making process.
- It is an unstructured and exploratory technique that deals with highly complex phenomena.
- This kind of research is usually done to understand the topic in-depth.
- It is carried out by taking interviews with open-ended questions, observations that are described in words, and so on.

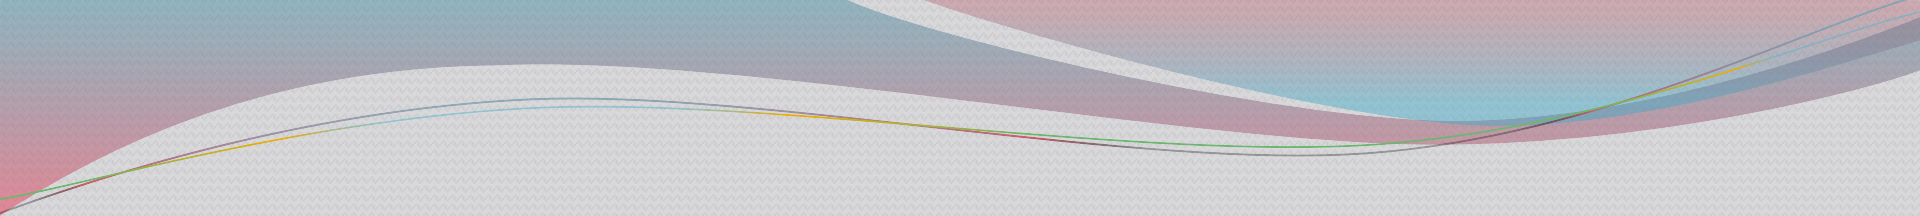

Types

- **Historical** research - studies available data to study, understand, and interpret past events.
- **Focus Groups** – This method involves a group discussion with a moderator to gather data on a specific topic or issue.
- **Ethnography** – This method involves the immersion of the researcher in the culture or group being studied to understand their experiences, values, and beliefs.
- **Case Studies** – This method involves an in-depth analysis of a single individual, group, or event to understand their experiences, motivations, and behaviours.

- 
- **Advantages:**
 - It has flexibility
 - It becomes possible to understand attitudes
 - It incorporates the human experience
 - It allows creativity to be a driving force
 - It gets to the reason behind the attitude of the responders.
 - It allows for detail-orientated data to be collected
 - It gives a lot of data to work on.
 - It is not very costly.

- **Disadvantages:**

- It does not statistically represent the data.
- It may require multiple sessions
- There is a chance of data loss due to its large data nature.
- It can be difficult to replicate results
- The results acquired from this approach can be influenced by the researcher's personal opinions.
- It can be influenced by researcher bias
- Time consuming.
- It creates data that is difficult to present

- Thank You

Steps in social research

Selection of the problem

- A research problem is simply the topic of research.
- A problem statement is the description of an issue or problem currently exist that needs to be addressed.
- It provides the context for the research study and generates the questions that the research aims to answer
- It is the focal point of any research.
- Basically research problem originates from the following three sources
 - I. Contemporary interest
 - II. own interest
 - III. gaps in the field

Key Characteristics of a Statement of the Problem

- It should address a gap in knowledge.
- It should be significant enough to contribute to the existing body of research.
- It should lead to further research.
- The problem should render itself to investigation through collection of data.
- It should be of interest to the researcher and suit his/her skills, time, and resources.
- The approach towards solving the problem should be ethical.

- For example a researcher may select a broad area “Domestic violence” as research problem
- He can split it in some area like
 - I. Situation of domestic violence
 - II. Causes of domestic violence
 - III. Impact of domestic violence
 - IV. Services available for the victims of domestic violence

Literature review

- **The review** of literature is a summary of all the reviews from various research literatures related to the current study carried out by a researcher.
- It helps to discover what is already known about the research problem and what more has to be done.
- An organized written presentation of what has been published on a topic by the scholars. (Burns and Grove, 2005)
- An Account of what has been published by accredited scholars and researchers. (Taylor, 2011)

Characteristics of a Good Quality Review of Literature

- A good review of literature must be comprehensive.
- It should include up-to-date references.
- It should be systemic.
- It should be reproducible.
- It should be free from bias.
- It should be well written.
- It should be in the form of sum of its parts.
- It should be clearly searched and selected.
- Accurate references should be given in the review

Purpose of Review of Literature

- to identify what is already known about a research problem.
- to understand previous knowledge.
- to get idea for a new research study.
- to avoid duplication.
- to narrow the problem to be studied.
- to get acquainted with the relevant theory, strategies, tools and instruments for conducting the research.
- to understand the different ways of conducting the research study.
- to identify comparative data in interpretation and discussion of previous study.
- to enable the investigator to gain expertise in his area of interest.

HYPOTHESES

- A hypothesis is a tentative answer to a question.
- “Hypothesis is a tentative prediction or explanation of the relationship between two variables’
- It implies that there is a systematic relationship between an independent and dependent variable”
- “A proposition which can be put to test to determinate validity” -Goode and Hatt

- Example of hypothesis are as follows
- The higher the illiteracy rate in a society, the higher will be the domestic violence.
- The higher the poverty rate in a society, the higher will be the domestic violence.

RESEARCH DESIGN

- Research design is the basic framework which provides guidelines for the rest of research process.
- Research design refers to the overall strategy utilized to carry out research to tackle established research question through the collection, interpretation, analysis and discussion of data
- “Research design constitute the blue print for the collection, measurement and analysis of data” – Bernard S Philips.
- “Research design as the logical and systematic planning and directing a piece of research” – Pauline and Young
- “Research design is the plan, structure and strategy of investigation conceived, so as to obtain answers to research questions and to control variants” – Fred N Kerlinger

- It contains information regarding
- What is the study about ?
- Why is the study being made ?
- Where will the study being carried out ?
- What type of data is required ?
- Where can the required data be found ?
- What periods of time will the study include ?
- What will be the sample design ?
- What techniques of data collection will be done ?
- How will the data be analysed ?
- In what style will the report be prepared ?

Data collection

- **Primary data** can be collected through:
 - By Observation
 - Through personal interview
 - Through telephone interview
 - By mailing of questionnaires
 - Through Schedules
- **Published data are available in:**
 - Publications of central, state and local newspapers
 - Publication of foreign government or of international bodies
 - Technical or trade journals
 - Books, magazines and newspaper and Internet
 - Public record and statistics, historical documents

Data analysis

- The Analyses of data can of two types: Quantitative analysis & Qualitative analysis
- This stage mainly include :
 - 1. Coding
 - 2. Editing
 - 3. Tabulation

Structure Of A Research Report

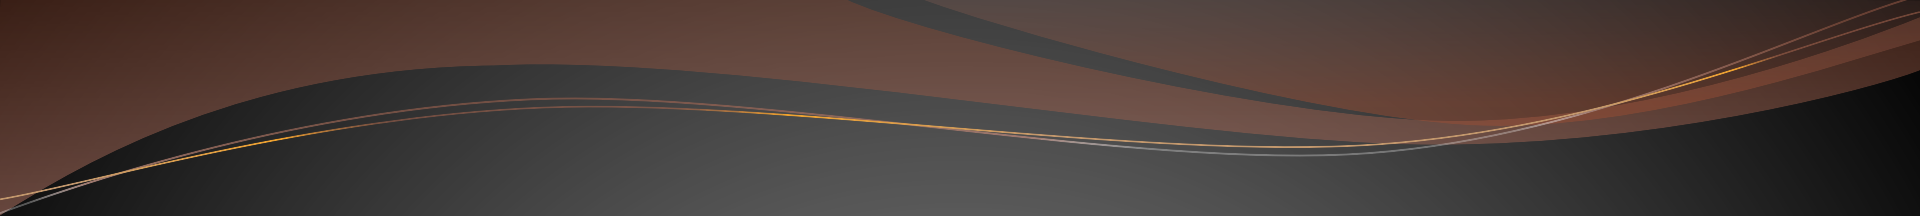

- The research report format mainly consists of three main sections:
- 1) The Introductory Section
- 2) The Main Body Of The Report
- 3) The Reference Section

- **1) The Introductory Section**
- a) Title Page
- b) Acknowledgments (if any)
- c) Table of Contents
- d) List of Tables (if any)
- e) List of Figures (if any)
- f) Abstract

- **2) The Body Of The Report**
- **2.1. Introduction**
- a) Statement of the Problem
- b) Significance of the Problem
- c) Purpose
- d) Statement of Hypothesis
- e) Assumptions
- f) Limitations
- g) Definition of important Terms

- **2.2. Review of Related Literature** (analysis of previous research)
- **2.3. Design of the Study**
 - a) Description of Research Design and Sources of Data
 - b) Sampling Procedures
 - c) Methods and Instruments of Data Gathering
 - d) Statistical Treatment

- **2.4. Analysis of Data text with appropriate**
- a) Tables
- b) Figures
- **2.5. Results And Discussion**
- a) Major Findings (reject or fail to reject H_0)
- **2.6. Summary and Conclusions**
- a) Conclusions
- b) Recommendations for Further Investigation
- **3) The Reference Section**
- a) References/ Bibliography
- b) Appendice

- Thank you all

Classical Theorists

August Comte

- Born January 19, 1798, in France, died September 5, 1857, Paris.
- He was a school dropout but still considered as a father of sociology.
- Founder of Sociology because he first used the term Sociology as the study of society
- Lived during the French Revolution and believed his philosophy would bring stability to the world;
- Believed sociologists should use the scientific methods to uncover the laws that govern the operation of society;
- Comte wanted to use scientific observation to study social behavior
- He also distinguished between studying social stability and order (social statics) and study of social change (social dynamics).

Social Statics

- It describes the processes by which the overall structure of a society remains relatively stable, or unchanged, over time.
- It studies the current laws, rules and present conditions of the society.
- It observes how these laws and rules are affecting the present society.
- It investigates the law of action and reaction of the different parts of the social system.
- It is concerned with the study of major institutions, which preserve the social order.
- For example, family; It provides the base for the social order and progress of the society.
- Individual, family and social combinations are three levels of society.

Social Dynamics

- It is a processes by which elements within the society change in a systematic fashion to allow for social development.
- It is concerned with the matter of social progress.
- The term 'Progress' refers to the orderly development of the society, which are according to the natural law.
- Dynamics begin when the functions of the social institutions are altered or changed.
- Thus, the social dynamics are found in all the aspects of the society, such as physical, moral and intellectual.
- However, the intellectual is the most important.

Law of three stages

- Comte's ideas relating to the law of three stages reveal that man is becoming more and more rational and scientific in his approach by gradually giving up speculations, imagination etc.
- Comte considered his law of Three stages based upon belief in social evolution to be the most important. There has been an evolution in the human thinking.
- This law appeared in, the year 1822 in his book Positive Philosophy.

Theological stage(<1300A.D)

- Theological thinking implies belief in super natural power.
- This type of thinking is found among the primitive races.
- In this stage, all natural phenomena and social events were explained in terms of super natural forces, which ultimately explaining everything as the product of God's will.
- Both philosophical speculation and scientific explanation were absent, rather dominated by religious interpretation of social phenomena.
- This stage is dominated by priests and ruled by military men.
- This stage is further sub-divided into three sub stages

Fetishism

- **Fetish** means “inanimate” and **ism** means “philosophy”.
- This is a philosophy which believes that super natural power dwells in inanimate objects.
- Pieces of wood, stone, skull etc. are believed to be the dwelling place of super natural powers, as these objects are believed to possess divine power.
- But too many fetishes created confusion for people.

Polytheism

- **Poly' means** many. So the belief in many Gods is called polytheism. Human being received variety or diversity of natural phenomena. Each phenomenon was kept under the disposal of one God.
- One God was believed to be in charge of one particular natural phenomenon.
- People created the class of priests to get the goodwill and the blessings of these gods.
- The presence of too many gods also created for them mental contradictions. Finally they developed the idea of one God, i.e. monotheism

Monotheism

- **It means** belief in one single God. He is all in all. He controls everything in this world. He is the maker of human destiny.
- The monotheistic thinking symbolizes the victory of human intellect and reason over non-intellectual and irrational thinking.
- Slowly feelings and imaginations started giving place to thinking and rationality.
- In monotheism a simplification of many gods into one God takes place

Metaphysical (1300-1800)

- It is a bit more revolutionary stage than the theological one.
- It is a transitional stage between the preceding theological stage and the ensuing positivistic stage.
- ‘Meta’ means beyond and physical means material world.
- Metaphysics refers to the studies of what cannot be reached through objective studies of material reality
- Abstract forces replace supernatural beings as the explanation for the original causes and purposes of things in the world.
- Mysterious forces such as “nature” are invoked to explain why things are the way they are
- Rationalism started growing instead of imagination.

- Rationalism states that God does not stand directly behind every phenomenon.
- Under metaphysical thinking it is believed that an abstract power or force guides and determines the events in the world.
- Metaphysical thinking discards belief in concrete God.
- It is characterized by the dominance of “ratiocination.”

Positive/Scientific stage(1800-now)

- The positive stage represents the scientific way of thinking.
- The positive or scientific knowledge is based upon facts and these facts are gathered by observation and experience.
- All phenomena are seen as subject to natural laws that can be investigated by observations and experimentation.
- The dawn of the 19th Century marked the beginning of the positive stage in which observation predominates over imagination.
- All theoretical concepts have become positive.
- The concept of God is totally vanished from human mind. Human mind tries to establish cause and effect relationship.
- Mind is actually in search of final and ultimate cause.

Karl Marx (1818-1883)

- Got his doctorate from the University of Berlin,
- Moved to Paris but was expelled from there at the request of the German government...moved to Brussels and then London
- Believed that the overall structure of society is influenced by how the economy is organized;
- Society is divided into two: Those that own the means of production and those who own only their labor
- This imbalance of power leads to a conflict between owners and laborers
- Saw that the ills of the capitalist system would not be solved until the workers overthrew those in power.

Marx's view

- Was a **materialist** – to understand society, we have to understand how it organizes production
- **Forces of Production** – land, technology, skills, knowledge, etc.
- **Social Relations of Production** – who controls the forces of production, and how
- The forces of production will come into conflict with the relations of production

- Those is the top class control the wealth, and those in the lower class do most of the work that produces the wealth = exploitation
- This exploitation is the basis of class conflict
- Historical examples of class conflict i.e. slave vs slave holder, feudal lord vs peasant;
- Capitalists (**bourgeoisie**) vs workers (**proletariat**) are Marx's focus
- Bourgeoisie alienates proletariat

Structure of society

- **Economic Base** – the forces and relations of production (i.e. the bourgeoisie and proletariat)
- **Superstructure** – the legal and political structures of society
- The economic base influences the superstructure; economic power is the basis of all other types of power
- The bourgeoisie, therefore, control society's institutions to help maintain the status quo (capitalism)

Marx's critique capitalism

Capitalism is...

- Exploitative
- Alienating
- Undemocratic
- Irrational
- Environmentally destructive
- Prone to war

Communism/socialism

- In his writings, Marx says very little about what a socialist or communist society would look like

What he does say:

- Cooperation rather than division
- Economy democratically controlled
- Social equality exists and all forms of oppression would disappear
- The environment would be respected
- No profits for a minority of people
- Work would be fulfilling

Emile Durkheim (1858-1917)

- Emile Durkheim (1858-1916) was born in Lorraine, France.
- He was a contemporary of Weber (1864-1920), but probably never met Weber, and lived his adult life after Karl Marx died.
- Durkheim came from a Jewish background, and was a superior student at school and University.
- In 1902 he was appointed to a professorship at the Sorbonne, in Paris, where he remained until he died.
- Durkheim's most famous works are *The Division of Labor in Society* (1893), *The Rules of Sociological Method* (1895), *Suicide* (1897) and *The Elementary Forms of Religious Life* (1912).

Theory of suicide

- Durkheim first began to study the problem of suicide in the year 1888.
- In 1897, he published his book entitled “Suicide” and this was his third major social work, after “The theory of division of labour” and “The rules of sociological method”.
- The main purpose of Durkheim’s attempt to study suicide was search for the social factors responsible for suicide rather than looking at the psychological states of individuals who take their own lives.

Types of Suicide

- **1) Egoistic Suicide:**
- a form of self centered suicide which is a result of the individual's lack of full participation together with emotional involvement that participation entails.
- It's a result of low degree of integration.
- The individual feels isolation, deprivation and detachment.
- For Durkheim, this kind of state of mind exists among Protestants than Catholics, among unmarried as opposed to the married, divorced than un-divorced.

- **2) Altruistic suicide:**
- it is the result of an extreme integration into a group/society to the point where group norms and goals are the only thing that matter.
- Social norms or group expectations are strong enough to force the individual to commit suicide.
- Altruistic suicide is common in “traditional” societies where values, norms, customs and expectations of the group have an extreme influence upon the individual.
- For example, Chinese society, killing oneself is preferred to surrendering to an enemy.
- In some Indian societies a widow must accompany her deceased husband by killing herself at his funeral.

• 3) **Anomic suicide:**

- Anomie is a disjunction between means and ends or a breakdown of societal norms—a state of normlessness.
- It is the failure to internalize the norms of the society or inability to adjust to changing norms or tension resulted from the conflicting norms themselves.
- In ability to adjust and choose to commit suicide occurs during economic crisis or when a there occurs a change in government.
- It is a result of low degree of regulation of norms of the behavior of individuals.
- It is common in industrial societies.

• 4) Fatalistic Suicide

- Fatalism signifies a form of suicide which occurs because of an excess of social regulation.
- It occurs because of an overly developed system of control over the individual.
- Fatalistic suicide was prevalent in slave society.

Social Solidarity

- Emile Durkheim argued that there are two different kinds of solidarity (unity) among people in a society that holds them together.
- **Mechanical solidarity**
- Characteristics of pre-industrial society
- In these societies, all of the people were of the same religion, the same culture, and did the same tasks.
- Similarity of interest and experience as well as no division of labor and differentiation of tasks.
- The social institutions perform almost all societal functions.
- There were shared values, norms and beliefs all of which help to hold society together.

- **Organic solidarity**
- This occurs in the modern industrial type of society.
- In this type of society, there is a division of labor where people are engaged in specialized tasks and so their interests, values are different.
- Durkheim believed that being different would not mean an end to group solidarity, rather as people became more specialized and different, they became more dependent on each other.
- E.g. the farmer is dependent on blacksmiths for agricultural tools, a tailor for clothing, cobblers for shoes, etc.

Herbert Spencer(1820-1903)

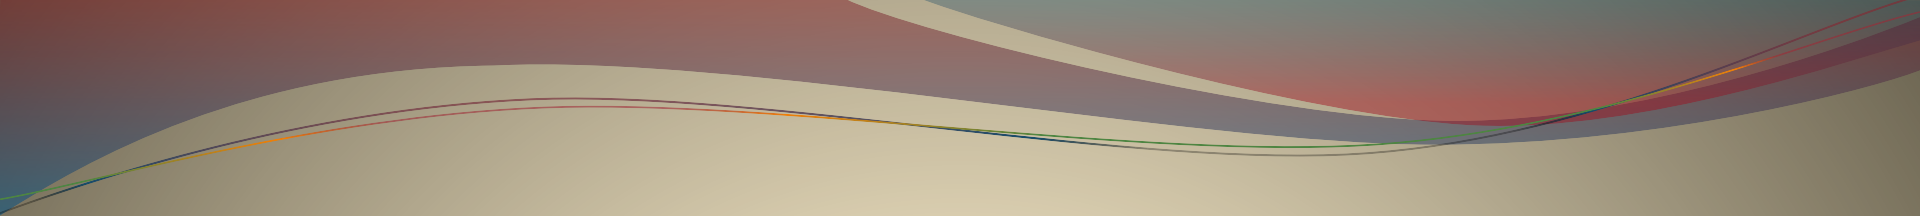

- Spencer was born in Derby, England on 27 April 1820, the eldest of nine children, but the only one to survive infancy.
- He was a strong believer of the theory of evolution.
- He advocated the superiority of sciences over religion.
- His views were highly influenced by his father and uncle.
- From 1837-1841 he worked as a railway civil engineer for which he was professionally trained.
- Later, he turned towards Journalism and political writing.
- **In 1851** Spencer published his first book, Social Statics, or the Conditions Essential to Human Happiness.

- Influenced by Charles Darwin and so adopted a biological model of society
- In a living organism, the biological systems work together to maintain the health of the organism... so he saw society as a set of independent parts that work together to maintain the system over time
- Took the theory of evolution to describe the nature of society: saw social change and unrest to be natural occurrences in a society's evolution toward stability and perfection

- Thought that since the best aspects of society will survive over time [“survival of the fittest”], we shouldn’t correct social ills
- Thought that the fittest societies would survive over time, which will lead to a general upgrade of the world as a whole
- Started type of sociology called Social Darwinism: the perspective that holds that societies evolve toward stability and perfection

Max Weber(1864-1920)

- Max Weber created his own theory of **social stratification**, defining social differences through three components: class, status, and power.
- Here, Class is a person's economic position based on both birth and individual achievement.
- Status is one's social prestige or honor either influenced or not influenced by class;
- Power is the ability for someone to achieve their goals despite the resistance of others.

Social Institution

Social Institution

- **Social** Institution is a social structures and social mechanisms of social order and cooperation that govern the behavior of its members.
- Is a group of social positions, connected by social relations, performing a social role.
- Any institution in a society that works to socialize the group of people in it.

Characteristics of an Institution

- Palispis (1996)
- Institutions are purposive.
- Relatively permanent in content.
- Institutions are structured.
- Institutions are a unified structure.
- Institutions are necessarily value-laden

Functions of an Institutions

- 1. Institutions simplify social behavior for the individual person.
- 2. Provide ready-made forms of social relations and social roles for individual.
- 3. Act as agencies of coordination and stability for the total culture.
- 4. Control behavior

- **Major Social Institution**

- The Family
- Marriage
- Education
- Religion
- Economic Institutions
- Government as a Social Institution

Family

- The word 'Family' has been taken over from Latin word 'Famulus' which means servants. Thus originally family consisted of a man and women with a child or children and servants.
- **Merrill**-“Family is the biological social unit composed of husband, wife and children”.
- **M.F. Nimkoff**- Family is a more or less durable association of husband and wife , with or without children.
- **Ogburn**-“Family is more or less durable association of husband and wife and children”.
- **Clare**-“Family is a system of relationship existing between parents and children”.

Types of Family

- TYPE OF FAMILY BY AUTHORITY:

- • Patriarchal Family.
- • Matriarchal Family.
- • Democratic Family.

- TYPE OF FAMILY BY STRUCTURE

- • Joint family system /Extended family
- • Nuclear family.
- Single parent family

- TYPE OF FAMILY BY SETTLEMENT:

- • Patrilocal Family.

- • Matrilocal Family.

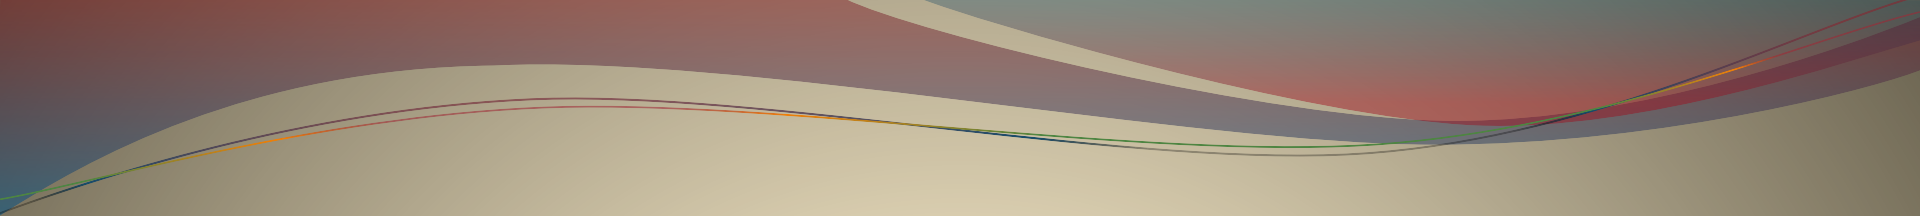

- • Neo local Family.

- TYPE OF FAMILY BY LINEAGE.

- • Patrilenial Family.

- • Matrilenial Family.

- • Bilateral Family.

- 
- TYPES OF FAMILY BY AMOUNT OF MATES
 - Monogamous family
 - Polygamous family
 - Polyandrous family

Functions of family

- Stable satisfaction of Sexual needs
- Procreation and Rearing of Children
- Provision of Home
- Socialization
- Economic functions
- Educational functions
- Religious functions
- Health related functions
- Recreational function

Marriage

- Two Aspects of Marriage:
- 1. Legal point of view- states that marriage is a contract.
- 2. Religious point of view- states that marriage is a sacrament.

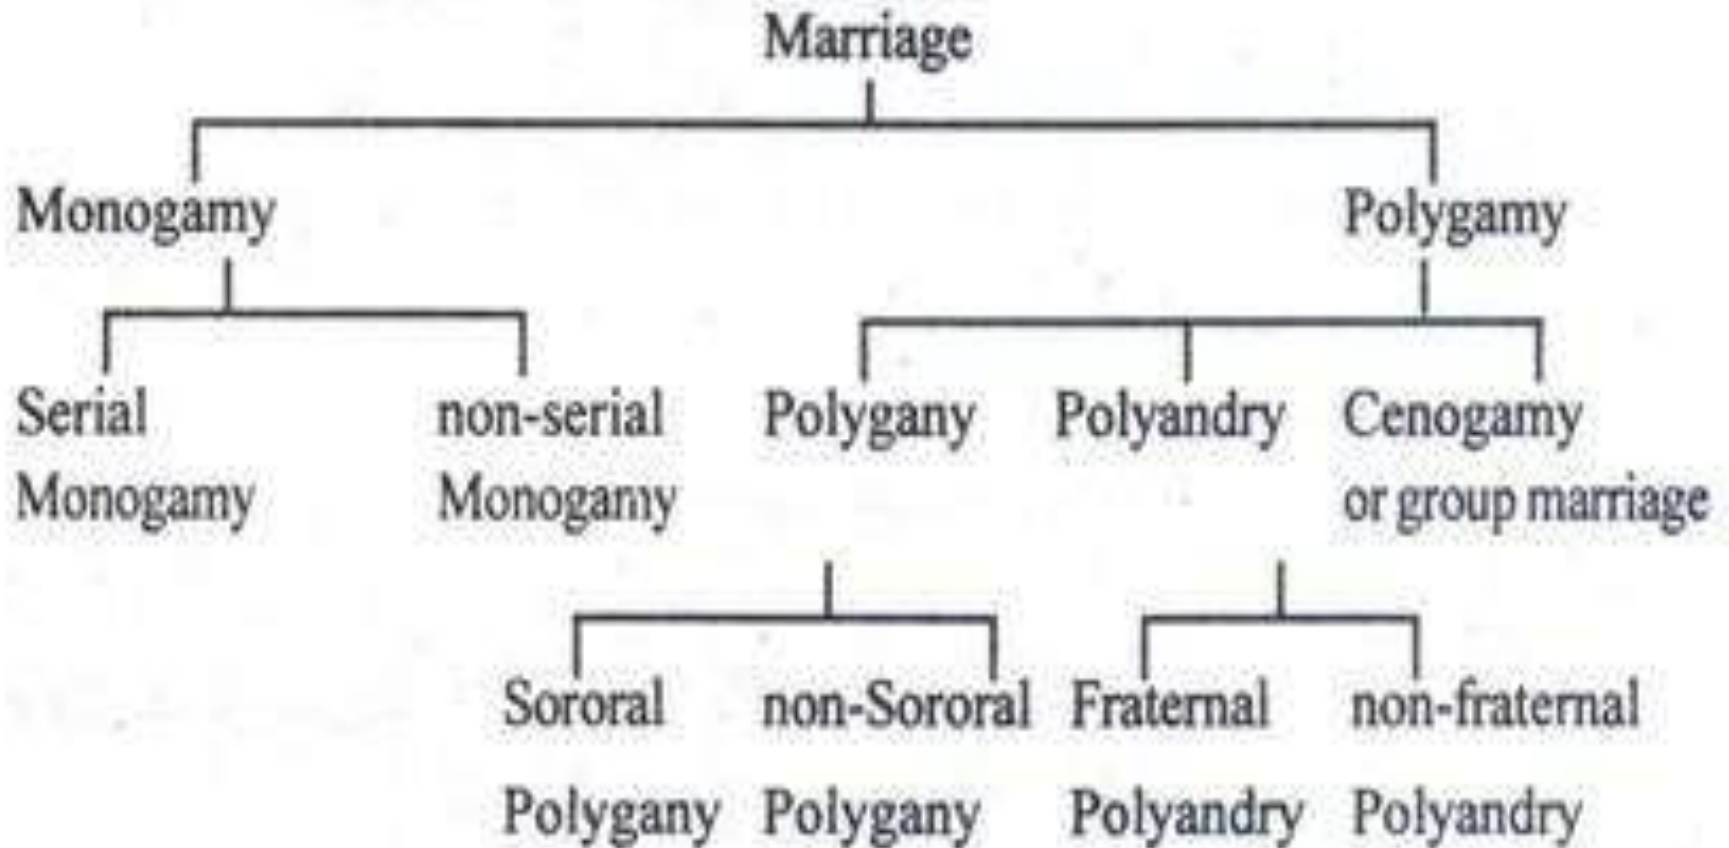

Marriage

- **B. Malinowski:**
- Marriage is a contract for the production and maintenance of children.
- **Robert H. Lowie:**
- Marriage is a relatively permanent bond between permissible mates.
- **Ian Robertson:**
- Marriage is a socially approved mating arrangement between two or more peoples.
- **Encyclopedia Britannica:-**“Marriage is a physical, legal and moral union between man and woman in complete community life for the establishment of a family.”

Characteristics of marriage

- Marriage is a universal social institution
- Marriage is a permanent bond between husband and wife.
- Relationship is enduring
- Marriage requires social approval
- Marriage establishes family
- Marriage creates mutual obligations between husband and wife.
- Marriage is always associated with some civil and religious ceremony
- Marriage regulates sex relationship

Forms/Types of Marriage

(1) **Monogamy**- marriage of one man with one woman at a time

- (i) **Serial Monogamy**- Having only one monogamous relationship at a time, but multiple partners throughout a lifetime due to death, divorce, or choice.
- (ii) **Non-serial Monogamy**- where a man gets married to a woman and stays with each other till he or she dies.

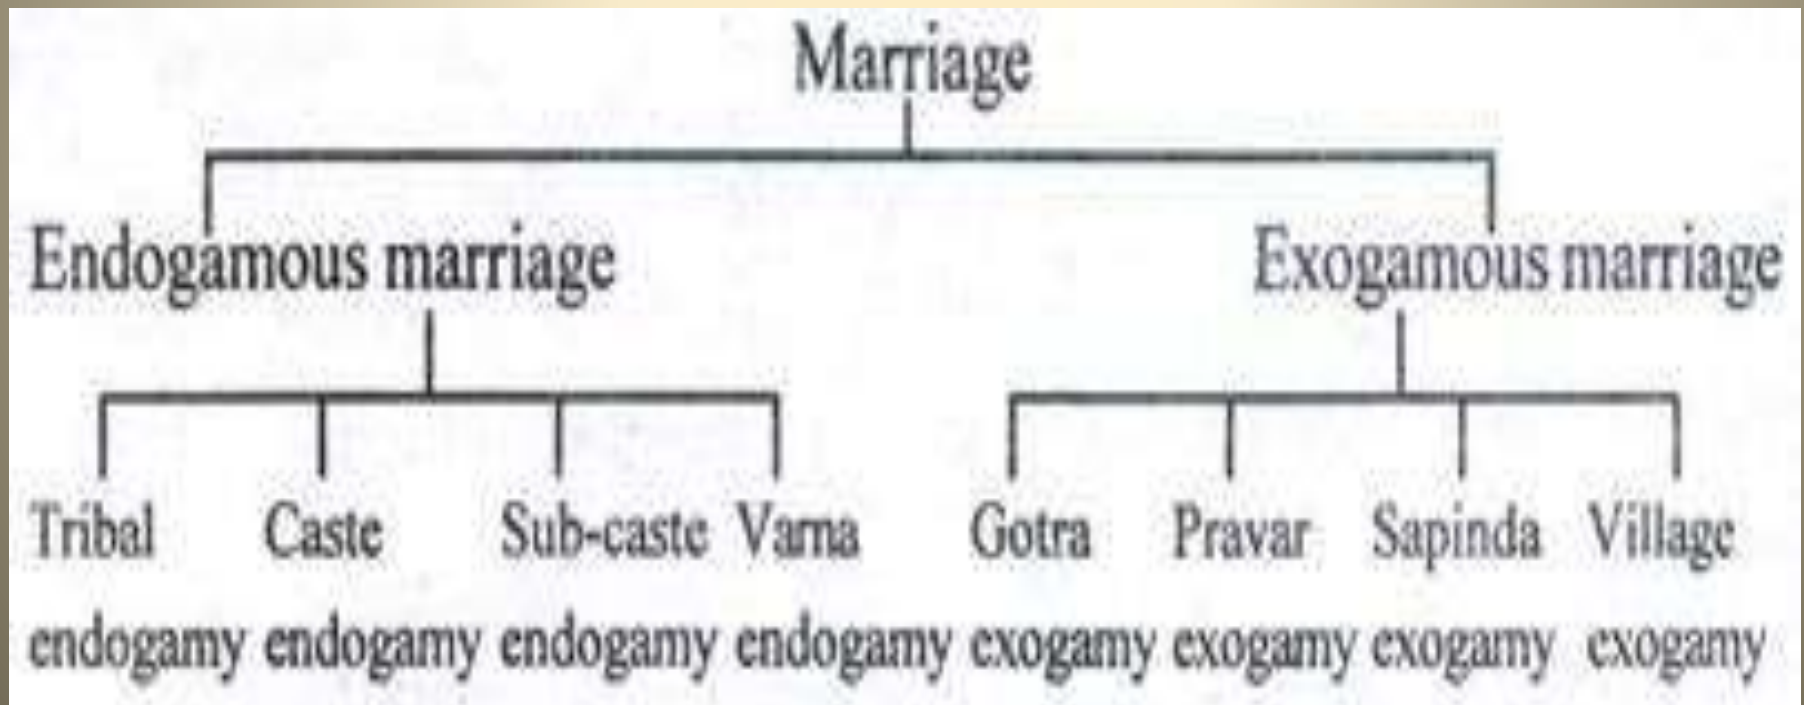

(2) **Polygamy**- there is plurality of partners

- (i) **Polygamy**- a man marries more than one wife at a time

- **(a) Sorroral Polygamy-** a man marries the sisters of his wife at a time or after the death of his wife
- **(b) Non-sororal Polygamy-** a man marries several women at a time who are not necessarily sister to each other
- (ii) Polyandry-** a woman marries several men at a time.
 - **(a) Fraternal Polyandry-** When several brothers share a common wife
 - **(b) Non-fraternal Polyandry-** husbands of a woman is not necessarily brother to each other.

- **(iii) Endogamy or Group Marriage-** a group of men marry a group of women at a time.

(B) On the basis of choice of mate

(1) **Endogamy or endogamous marriage-** marriage within one's own group.

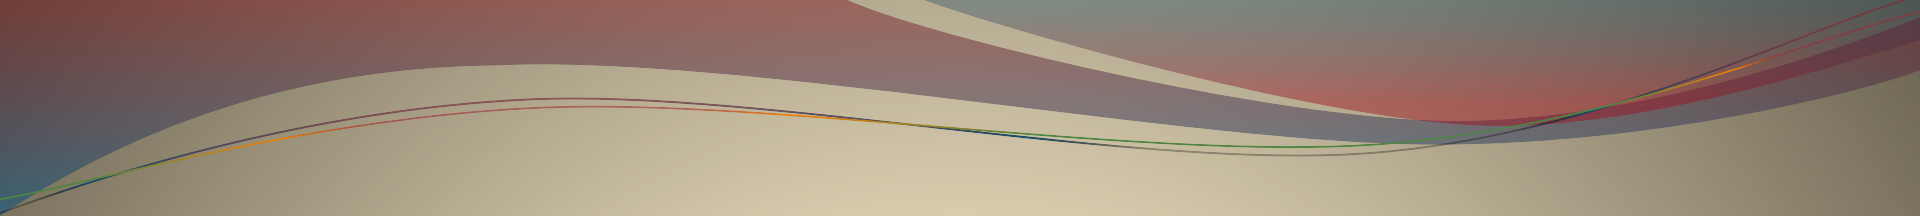

- (a) **Caste endogamy**-marriage takes place within one's own caste.
- (b) **Sub-caste endogamy**-marriage takes place within one's sub-caste only.
- (c) **Varna endogamy**-In varna endogamy the choice of mate is restricted to one's own varna only.
- (d) **Tribal endogamy**-married in which the choice of mate is restricted to one's own tribal group.

- **(ii) Exogamy or Exogamous marriage**-marriage in which an individual has to marry outside one's own group.
- **(a) Gotra exogamy**-one has to marry outside one's own gotra
- **(b) Pravara exogamy**-one has to marry outside one's own pravara.
- **(c) Sapinda exogamy**-marriage within one's own sapinda is forbidden
- **(d) Village exogamy**-marriage within one's own village is forbidden

- **(i) Cross-cousin marriage**-marriage takes place between one's mother's brother's daughter/son with father's sister's son/daughter
- **(ii) Parallel Cousin marriage**-marriage takes place between the children of either two sisters or two brothers.
- **(iii) Levirate**-When a woman marries her husband's brother after the death of her husband it is known as levirate.
- **(iv) Sororate**-When a man marries his wife's sister after the death of his wife or even when the wife is alive it is called as sororate.

Functions of marriage

- Sex regulation
- Procreation of children
- Children socialization
- Provide legal parents to children
- Give economic security to women
- Provide social security to women
- Increase man power
- Establishes joint fund
- Fulfillment of basic needs
- Perpetuation of the lineage

- Thanks

Social Stratification

Concept of Social Stratification

- The term stratification is derived from the geological concept of “Strata” which means rock layers created by natural processes.
- Social stratification refers to how societies categorize people based on factors such as wealth, income, education, family background, and power.
- **T.B.Bottomore**- *No society is classless or unstratified.*
- Ogburn and Nimkoff – *‘the process by which individuals and groups are ranked in a more or less enduring hierarchy of status is known as stratification’.*

- Gisbert- *‘social stratification is the division of society into permanent groups of categories linked with each other by the relationship of superiority and subordination’.*
- R.W. Murry – *‘social stratification is a horizontal division of society into ‘high’ and ‘lower’ social units.*
- Lundberg – *‘a stratified society is one marked by inequality, by differences among people that are evaluated by them as being ‘lower’ and ‘higher’.* •

Characteristics

- Social stratification is a trait of society, not simply a reflection of individual differences.
- Social stratification carries over from generation to generation
- Social stratification is universal but variable
- Social stratification involves not just inequality but beliefs as well.

Main Types of Social Stratification

- **There are four types of Social Stratification:**
- 1.Caste;
- 2.estate;
- 3.Social class and status; and
- 4.slavery.

Main Types of Social Stratification

- **1.Caste:**
- In a caste system, one's rank is determined at birth; based on ascribed characteristics.
- Caste system has majorly existed in India for about 3000 years, where Hindu religion had a very strong influence.
- Lifelong status determined by their parents
- Prohibits exogamy (marriage outside caste), promote endogamy

Main Types of Social Stratification

- According to caste system, society divided in to four classes based on concept of ritual pollution and purity.
 - I. The Brahmins (priests/teachers/healers) From the most pure
 - II. The Kshatriyas (soldiers/warriors)
 - III. The Vaishyas (traders/merchants)
 - IV. The Shudras (servants/labourers)

Main Types of Social Stratification

- **2.Estate**
- In the middle age, European society was divided into three estate:
- **1.First estate:** Feudal lord, Nobility.
- They enjoy the all facilities of the society.
- **2.Second estate:** Father and clergy of the charge.
- **3.Third estate:** general people, mass people, and commoners.

Main Types of Social Stratification

- **3.Social class and status:**
- Class system is a hierarchy based on achieved characteristics in a society of equal opportunity, i.e. a meritocracy.
- Class systems are legitimized by the belief that rewards are proportional to effort or talent, i.e. people get what they deserve.
- Social class is a category of people in a society, ranked according to such criteria as relative wealth, power, prestige, educational level or family background.

Main Types of Social Stratification

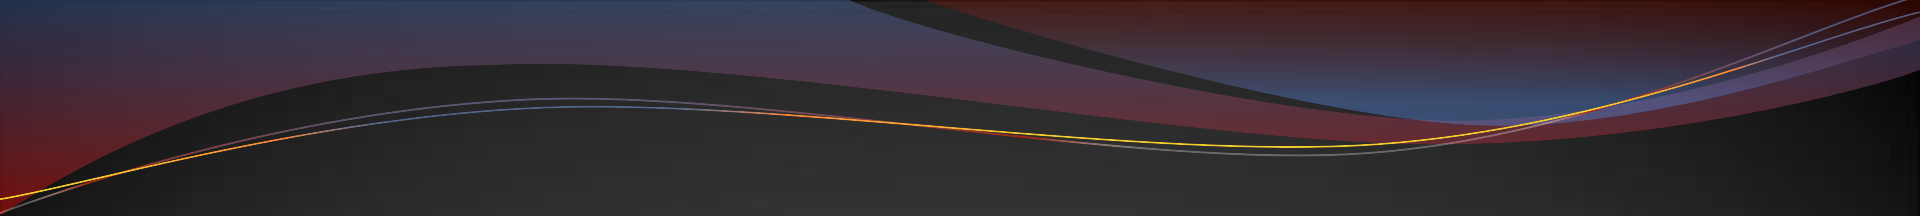

- In general, we can classify our society into six classes based on social class and status:
- 1. The upper class;
- 2. The upper-middle class;
- 3. The middle class;
- 4. The lower middle class;
- 5. the lower class; and
- 6. The working class

Main Types of Social Stratification

- Max Weber classified society into two ways:
- 1.property class; and
- 2.Lack of property class.
- *According to Karl Marx:*
- Classes developed on the basis of property and lack of property of means of production (Bourgeoisie and proletariat);

Main Types of Social Stratification

- **4. Slavery:**
- The oldest and most closed stratification system is slavery.
- It involves a situation in which one group or individuals (often known as masters) claim ownership of another group or individuals (called slaves).
- Slaves are the properties of their masters.
- Children born to slave parents automatically become slaves by virtue of their parents' status.
- The need for more people on farmland encouraged slavery to thrive through the Middle Ages.

- Thank you all

Drug abuse

Drug abuse

- Drug abuse is the non permissive consumption of certain substance that may lead to physical and psychological dependence.
- Drug abuse refers to the use of certain chemicals for the purpose of creating pleasurable effects on the brain.
- The use of illegal drugs or the use of prescription or over-the-counter drugs for purposes other than those for which they are meant to be used, or in excessive amounts

- The increased levels of dopamine caused by taking drugs create feelings of pleasure and euphoria. This is what makes people want to take drugs again and again, despite the negative consequences.
- World Health Organization estimated that more than 275 million people use illicit drugs, accounting for 5.6% of the global population, and 31 million drug users have an addiction.
- Approximately 2.5 million Bangladeshis are addicted to drugs, and 80% are adolescents and young people of 15–30 years.

Drugs available use in Bangladesh

- Opium;
- Heroin;
- Phensidyl;
- Pethidine;
- Cannabis;
- Ganja;
- Chorosh;
- Yaba;
- Vayagra;
- Sleeping pill;
- Seduxene;
- Diazepam;
- Dexpotent;

. Causes of Drug Addiction

- There are many which affected to drug addiction.
- Physical abuse;
- Loneliness;
- Desperation;
- Easy access to drugs;
- Families problems;
- Unemployment problem/economic insolvency;
- Curiosity to innovation;
- Loss of a loved one ;
- Poor self esteem ;
- School/College problems;
- Financial difficulties ;
- Failed romance etc.

Steps to Reduce this Problems

- There are some step to get clean from Drugs in Our Country.
- Families should be aware about there Son/Daughter.
- The program will strengthen the anti-drug smuggling.
- Be employments.
- Development and refinement of human values.
- Educational Awareness from Parents.
- Increased Personal and Social ability.
- Leave the bad company.
- Be gained general knowledge about dangerous of Drug.

- Thank you all

Globalization

- GLOBALISATION is a process of interaction and integration among the people ,companies and governments of different nations ,a process driven by international trade and investment and aided by information technology.
- This process has effects on the environment, culture, political systems, economic development, environment, prosperity, human physical well being in societies.
- It also refers to movement of people and knowledge across international borders.
- It is a result of human innovations and technological process

- “The growing economic interdependence of countries worldwide through increasing volume and variety of cross border transactions in goods and services and of international capital flows, and also through the more rapid and widespread diffusion of technology” (IMF)
- IMF identified four basic aspects of globalization:
 - I. trade and transactions
 - II. capital and investment
 - III. movements migration and movement of people
 - IV. dissemination of knowledge

Features of globalization

- Liberalization
- Connectivity
- Borderless Globe
- Globalization of Economic Activity
- Economic Interdependence
- Liberalization of Import – Export system
- Cultural Diversity
- Mobility
- Increased Collaboration
- Free Flow of Factors of Production
- Standardized Technology
- Global Competition
- Facilitated by Global Organizations

Benefits of globalization

- Growth in Trade
- Customer Supremacy
- Greater competition
- Foreign Direct Investments (FDIs)
- Reducing monopoly profits
- International Cooperation
- Improved Information Technology
- Use of Modern Technology
- Advancement in Transportation and Communication

- Expansion of Trade and Commerce
- Free Movement of Capital and technology
- Expansion of market
- Consumers and owners free from govt. interference
- Increase of production
- End of monopoly system
- Reduction of import duties
- Increase FDI.
- Employment generation

Costs of Globalization

- Threat to National Sovereignty
- Threat to Domestic Businesses
- Free trade can harm developing economies.
- Threat to Social and Cultural Values
- Environmental costs
- Labor drain
- Unequal competition
- Small/local industries meeting decay
- Rules of multinational company
- Inequality
- Dominant Global Brands

Economic Globalization

- Economic globalization defines the internationally connected free markets and trade, as well as the global movement of capital, business, goods, and people.
- Liberalization, deregulation, privatization, and lower transportation and communication costs are all part of economic globalization.
- **examples of economic globalization include:**
- Individual parts for one product, such as a car, made in and distributed from various countries all over the world
- A large corporation like Coca-Cola with offices, employees, factories, and distribution centers located around the globe
- Interconnected global stock markets that are affected by global economies and current events
- A disruption in the worldwide supply chain affects the prices of goods all over the world

Cultural Globalization

- Cultural globalization is marked by the spread and merging of individual cultures on a global scale.
- Cultural globalization is made possible by technological evolution like the Internet, social media, and advances in transportation.
- Cultural globalization has the potential to both bring the world's cultures together, as well as homogenize and dilute unique cultures.

- **Cultural globalization include:**
- Movement of people, and thus their cultures, around the world through international travel
- Globally accessible social media platforms that allow people to spread and access culture, ideas, knowledge, and more
- International popular culture spreads through media like music, social media, film, etc.
- International groups like the United Nations unite cultures together in various ways
- Sports like football are gaining international prominence
- Influence and spread of multiple religions, such as Christianity, around the world

Social globalization

- Social globalization refers to the sharing of ideas and information between and through different countries.
- In today's world, the Internet and social media is at the heart of this.
- Good examples of social globalization could include internationally popular films, books and TV series.
- The Harry Potter/ Twilight films and books have been successful all over the world, making the characters featured globally recognizable.
- However, this cultural flow tends to flow from the centre (i.e. from developed countries such as the USA to less developed countries).
- Social globalization is often criticized for eroding cultural differences

Political Globalization

- Political Globalization is a form of globalization that is used to manage and prevent political conflict among the countries.
- It tries to develop good relationships among the countries.
- Global organizations like the World Trade Organization and the United Nations were established to resolve political issues and maintain a healthy relationship among the countries.
- Political negotiations among the countries help to devise rules and regulations regarding immigration issues and how to enhance trade and cultural exchange among countries.
- Moreover, it also helps to mitigate the rivalry among the countries.
- Political globalization made global leaders work for the eradication of pandemic and other global issues like war and climate change.

- Thank you

Poverty

Poverty

- Poverty is a state or situation in which a person or a group of people don't have enough money or the basic things they need to live.
- *“a condition in which a person cannot maintain himself in accordance with living standards of his groups and hence is unable to achieve the mental and physical efficiency to function useful in it.”* (John L. Gillin)
- Poverty is pronounced deprivation in well-being, and comprises many dimensions. It includes low incomes and the inability to acquire the basic goods and services necessary for survival with dignity (World Bank).

Features of Poverty

- Poverty is defined as a relative concept:
- Poverty is defined as the lack of resources;
- It is defined as relative deprivation.
- It is the inadequacy to maintain the standard of society
- It is defined as a lack of fundamental capabilities
- Poverty is an individual concern as well as a broader social problem.
- Welfare programs are used by governments to help alleviate poverty.
- Poverty is the result of multiple factors, not simply income.

Poverty in BD

- The poverty rate in the country came down at 18.7 percent at the national level, which is 20.5 percent in the rural areas and 14.7 percent in the urban areas.
- the overall rate of extreme poverty in the country is 5.6 percent, which is 6.5 percent in the rural areas and 3.8 percent in the urban areas.(HIES,2022).

Poverty (Upper poverty line)

Years	National	Rural	Urban
2000	48.9	52.3	35.2
2005	40.0	43.8	28.4
2010	31.5	35.2	21.3
2016	24.3	26.4	18.9
2017	23.1	-	
2018	21.8	-	
2019	20.5	Source: HIES (2018-2019)	

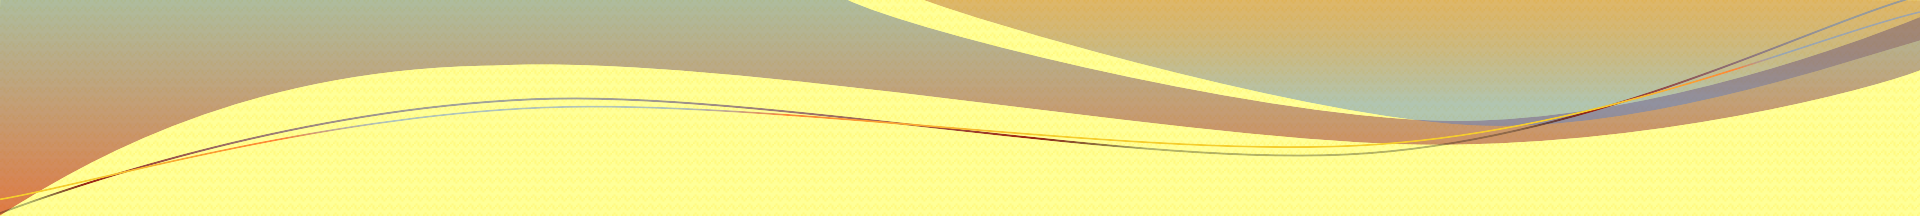

- **Extreme Poverty (Lower poverty line)**

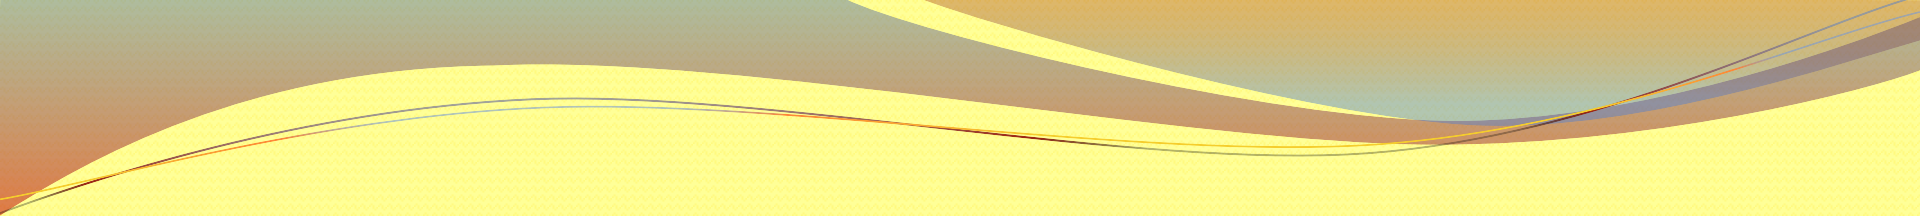

Years	National	Rural	Urban
2000	34.3	37.9	19.9
2005	25.1	28.6	14.6
2010	17.6	21.1	7.7
2016	12.9	14.9	7.6
2017	12.1		
2018	11.3		
2019	10.5	Source: HIES (2018-2019)	

Types of poverty

- On the basis of **social, economical and political** aspects, there are different ways to identify the **type of Poverty**:
 1. Absolute poverty.
 2. Relative Poverty.
 3. Situational Poverty.
 4. Generational Poverty.
 5. Rural Poverty.
 6. Urban Poverty.

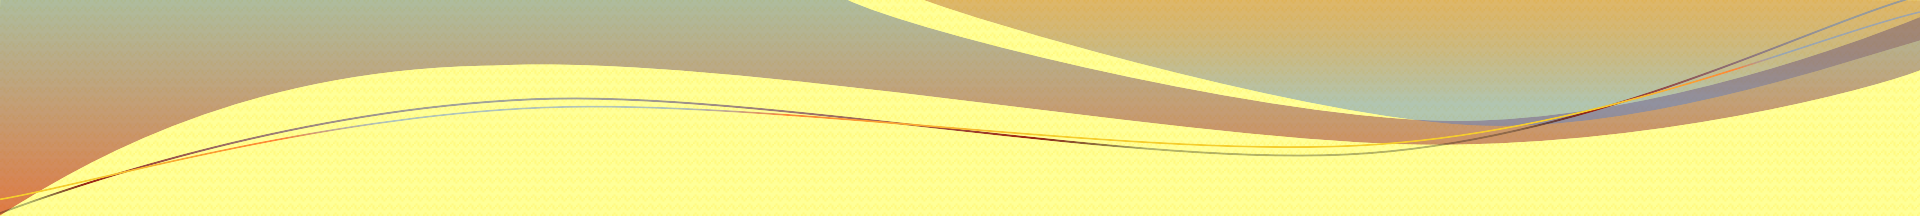

- **1. Absolute poverty:** it involves the scarcity of basic food, clean water, health, shelter, education and information.
- Absolute poverty is often known as “subsistence poverty” since it is based on assessments of minimum subsistence requirements such as food, clothing, shelter, health requirements etc.
- Individual is not able to maintain a minimum decent standard of living to maintain himself and his family.

- 
- **2. Relative Poverty:** It is defined from the social perspective that is living standard compared to the economic standards of population living in surroundings.
 - Poverty according to this concept is to be measured according to standards of life at a given time and place.
 - A person may be relatively poor among the persons of his own group who are relatively rich.

- 
- **3. Situational Poverty:** It is a temporary type of poverty based on occurrence of an adverse event like environmental disaster, job loss and severe health problem.
 - People can help themselves even with a small assistance, as the poverty comes because of unfortunate event.

- **4. Generational Poverty:** It is handed over to individual and families from one generation to the one.
- This is more complicated as there is no escape because the people are trapped in its cause and unable to access the tools required to get out of it.

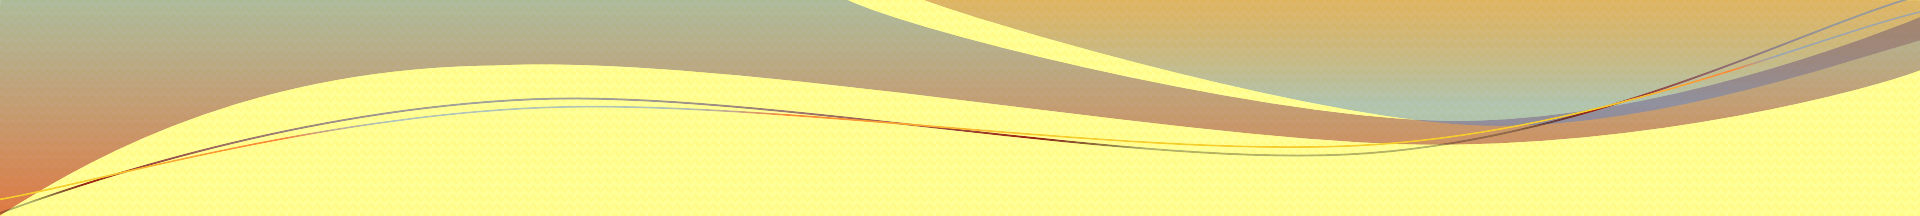

“Occurs in families where at least two generations have been born into poverty. Families living in this type of poverty are not equipped with the tools to move out of their situation” (Jensen, 2009).

- 
- **5. Rural Poverty:** It is the area where there are less job opportunities, less access to services, less support for disabilities and quality education opportunities.
 - People are tending to live mostly on the farming and other menial work available to the surroundings.

- **6. Urban Poverty:** It occurs in the metropolitan areas with population over 50,000. These are some major challenges faced by the Urban Poor:
 - Limited access to health and education.
 - Inadequate housing and services.
 - Violent and unhealthy environment because of overcrowding.
 - Little or no social protection mechanism.

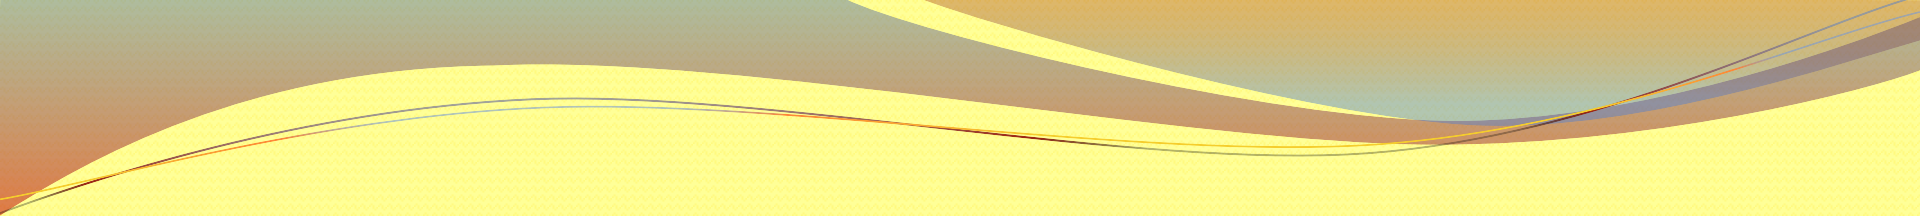

Causes of poverty in BD

- Low economic growth
- Lack of savings and investments
- Inequitable distribution of income
- Unemployment and underemployment
- High rate of population growth
- Lack of education
- Large Scale Import
- Traditional agriculture system
- Increase in Utility Charges
- Inflation
- Imposition of Taxes

- 
- Non-Productive Expenditures
 - Low Living Standard
 - Landlordism
 - Nepotism
 - Backward Infrastructure
 - Low level of human resource development
 - Dependent economy
 - Lack of good governance
 - Impact of natural disaster
 - Limited access to public services
 - Gender discrimination
 - Lack of industrialization

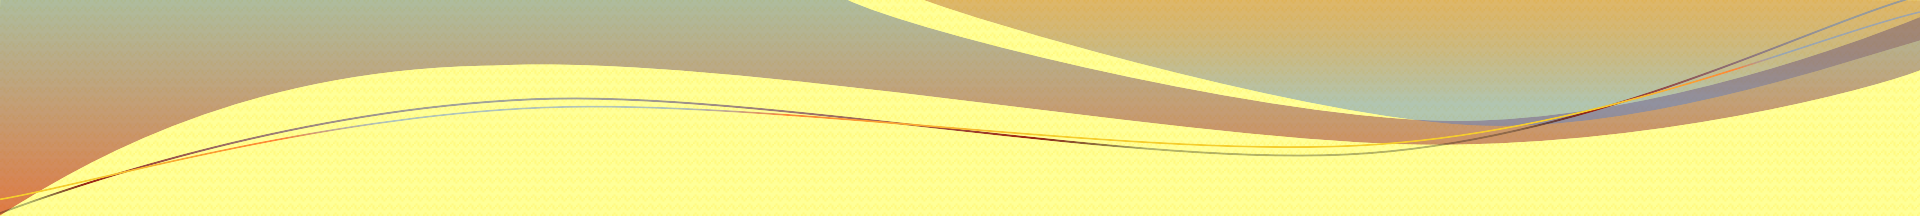

Effects of poverty

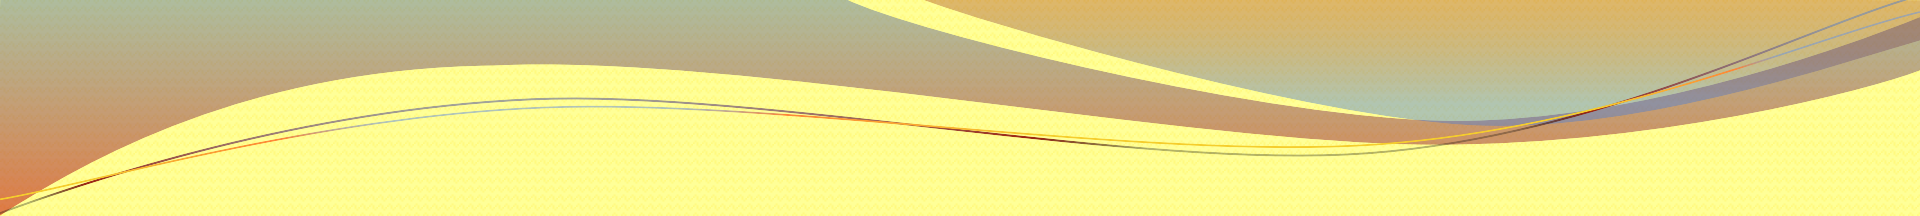

- Child labour
- Crimes and violence
- Malnutrition
- Homelessness
- Children antisocial behaviour
- Increased suicides
- Hunger and starvation
- Human trafficking
- High crime rate

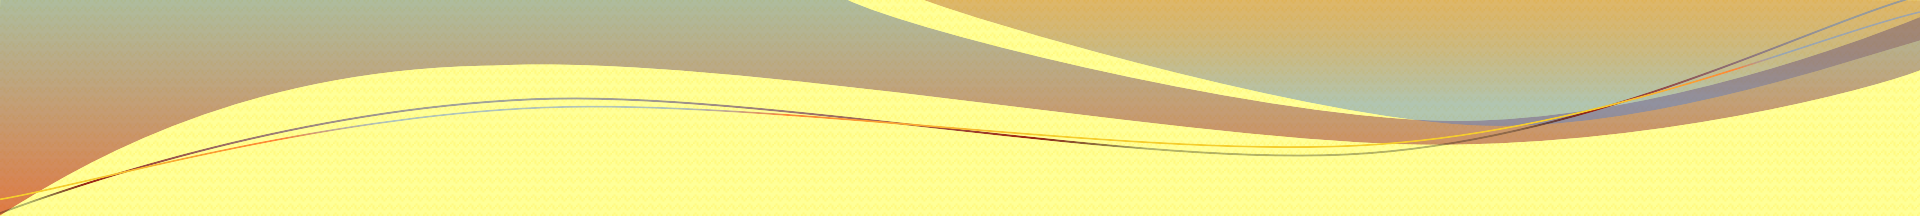

- 
- Increased risk of political violence
 - Terrorism, war, genocide
 - Homelessness
 - Lack of opportunities for employment
 - Low literacy
 - Social isolation
 - Increased discrimination
 - Lower life expectancy
 - Drug/alcohol abuse
 - Beggary
 - Street children
 - Slum

Strategies to reduce poverty and inequality

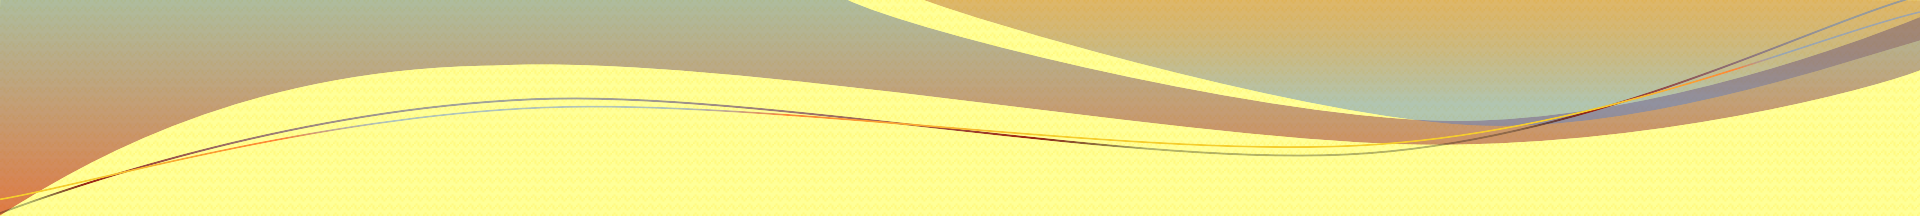

- Making Vision 2041 a Reality: Perspective Plan of Bangladesh 2021-2041
- The 8th Five Year Plan (8th FYP)
- Sustainable Development Goals (SDGs) and Bangladesh
- On-going Social Safety-net Programmes
- Old Age Allowance Programme
- Allowance Programme for Widow, Deserted and Destitute Women
- Maternity Allowance for Poor Mother

- 
- Working Lactating Mother Assistance Fund
 - Honorarium Programme for Freedom Fighters
 - Honorarium and Medical Allowance for Injured Freedom Fighters and Shaheed (Martyr) Families
 - Training and Microcredit Programme for the Freedom Fighters and their Dependents Self-employment
 - Allowance for the Financially Insolvent Disabled Citizens
 - Stipend for the Disabled Students
 - Capitation Grant for Non-government Orphanage

- 
- Development of the Living standards of the Bede community
 - Living Quality Improvement Program for Backward Communities
 - Programme for Improving the Livelihood of Transgender (Hizra) People
 - Programmes under Food Assistance
 - Food Friendly Programme
 - Initiatives Open Market Sale (OMS)
 - Distribution of Fortified Rice under Vulnerable Group Development
 - Food For Work (Kabikha) and Taka For Work (Kabita) Programmes

- 
- Vulnerable Group Feeding (VGF) Programme
 - Test Relief (TR) programme
 - Employment Programme for Ultra-Poor
 - **Ongoing Programmes/Projects under the Social Safety-net**
 - Ashrayan-2 (Poverty Alleviation and Rehabilitation) Project
 - Grihayan Tahabil

- **Poverty Alleviation Activities of Rural Development and Co-operative Division**
- Comprehensive Village Development Programme (CVDP) 3rd Phase
- Department of Co-operatives
- Bangladesh Rural Development Board (BRDB)
- Bangladesh Academy for Rural Development (BARD)
- Rural Development Academy (RDA), Bogura
- Palli Daridro Bimochon Foundation (PDBF)
- Small Farmers Development Foundation (SFDF)
- Bangabandhu Academy for Poverty Alleviation and Rural Development (BAPARD)

- 
- Employment Programmes of Karmasangsthan Bank
 - Bangabandhu Youth Credit programme
 - Bangladesh Bank Loan Programme
 - Palli Karma Sahayak Foundation (PKSF)
 - Micro Credit Fund for Women's SelfEmployment
 - Microcredit Programme Monitoring through Microcredit Regulatory Authority (MRA)
 - Microcredit Activities of Major NGOs

- Thank you all
